

**Supreme power** for the very highest hygiene standards

### **Powerful yet economical**

An advanced AirTeQ floorhead allows Miele vacuum cleaners to achieve optimum dust pick-up with ultra-low energy consumption. Vacuuming is also surprisingly quiet, thanks to the optimized airflow path – a unique Miele enhancement.

### **Love wood, love carpet, love floors**

From the Turbobrush to our specialist parquet floorheads available on our cylinders, we cater for a variety of floor types in your home.

### **Added comfort with an automatic wire recoiling mechanism**

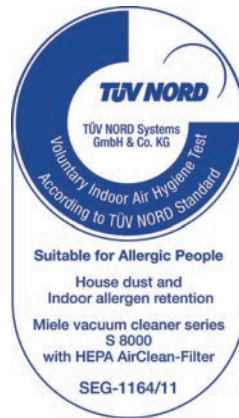

With an enlarged wire recoiling hole and pedal control, one single step will recoil the entire cable for effortless storage.

### **Small can still mean powerful**

Need a small-sized vacuum cleaner that still has plenty of muscle? Miele S6 delivers all the power and performance you need in a compact solution that can be neatly stored away. No matter what type of floor surface, Miele can take care of it.

# Highlights

## Premium quality

The body of Miele vacuum cleaners and all other major components undergo rigorous tests such that they are built to last for 20 years.

## Rigorous tests

- The floorhead withstand being tumbled 1,000 times in an 80cm tall roller and endure 1,000,000 impacts
- The power cord can be pulled out and reeled back in over 10,000 times
- The hose can be pulled out and retracted for 100,000 times when attached to a 5kg weight
- The connection between the plug and the power cord shows no sign of damage even after being flexed 150,000 times in a bending test

## Ideal for those with allergies

Miele S8 vacuum cleaners were awarded the coveted TÜV NORD certificate, which stands for high standard for Indoor Air Hygiene and Suitable for Allergic People.

TÜV is a neutral, independent laboratory renowned for professional testing and certification. It conducts rigorous testing over a simulated 12-week period during which house dust containing mite allergen, mould spores and bacteria is regularly vacuumed.

The results? Of the billions of bacteria the Miele S8 vacuum cleaner vacuumed, it emitted less than 10 cfu of bacteria per cubic meter – making it one of the few vacuum cleaner brands available through retail outlets that's TÜV NORD certified.

## Innovative Allergotec floorhead leaves floors visibly cleaner

Especially beneficial for allergy sufferers, the advanced Allergotec floorhead has a built-in hygiene sensor and indicator light. During vacuuming, the sensor constantly monitors cleaning progress and the indicator turns green when all allergens have been successfully vacuumed.

# Highest hygiene level

## Premium quality from Germany

Made in Germany, Miele vacuum cleaners are manufactured to the very highest standards and rigorous quality controls. Each Miele vacuum cleaner must pass stringent tests and is made to last for 20 years.

## AirClean System – meeting the very highest hygiene standards

For Miele, clean exhaust air is a given. As well as excellent filter efficiency, our vacuum cleaners also have a sealed housing so that no grains of dust can escape. A high efficiency motor, well designed floorhead, HyClean dust bag and HEPA 13 filter\* are all part of Miele's holistic approach to dust busting. These features all work in combination to ensure no dust escapes. This means that the exhaust air expelled back into your home is clean, protecting the health of your family.

### Strong suction power

A highly efficient motor developed in Germany by Miele works in tandem with the most compatible floor head. This is key to our unique Airflow design which provides powerful suction power for optimum dust pick-up performance.

### Superior HyClean dust bag

The multi-ply HyClean dust bag has a special non-woven layer with a structure that locks in over 99.9% of dirt particles.

### Clean exhaust air

Superior HEPA 13 Filter\* effectively filters out airborne dust particles as small as 0.3µm, including most allergens. Filtration up to 99.95%. This means the expelled air is significantly cleaner than the ambient air. A TimeStrip function indicates when a new filter should be fitted to ensure optimum filtration.

### Excellent durability

A powerful filter removes fine particles from the air intake to ensure long and problem-free operation of the motor. Additionally, a highly efficient seal on the motor housing prevents any grains of dust escaping.

N.B. Features may vary depending on model.
