To avoid the risk of accidents or damage to the appliance it is essential to read these instructions before it is installed and used for the first time.

Warning and Safety instructions

The steam oven with microwave is referred to in the following instructions as a steam oven.

This appliance complies with statutory safety requirements. Inappropriate use can, however, lead to personal injury and damage to property.

To avoid the risk of accidents and damage to the appliance, please read these instructions carefully before using it for the first time. They contain important notes on installation, safety, use and maintenance. Miele cannot be held liable for damage caused by non-compliance with these instructions.

Keep these instructions in a safe place and ensure that new users are familiar with the contents. Pass them on to any future owner.
Warning and Safety instructions

Correct application

- This steam oven is intended for use in domestic households and similar working and residential environments.
- This steam oven is not intended for outdoor use.
- This steam oven is intended for domestic use only as described in these operating instructions. Any other usage is not supported by the manufacturer and could be dangerous.
- Danger of burning. Do not use the steam oven to store or dry items which could ignite easily. If such items were dried in Microwave mode, the moisture in the item would evaporate causing it to dry out and even self-ignite.
- The steam oven can only be used by people with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, if they are supervised whilst using it, or have been shown how to use it in a safe way and recognise and understand the consequences of incorrect operation.
- This steam oven is supplied with a special lamp to cope with particular conditions (e.g. temperature, moisture, chemical resistance, abrasion resistance and vibration). This special lamp must only be used for the purpose it is intended for. It is not suitable for room lighting. Replacement lamps may only be fitted by a Miele authorised person or by Miele Service.
Warning and Safety instructions

Safety with children

- Activate the system lock to ensure that children cannot switch on the steam oven inadvertently.

- Children under 8 years of age must be kept away from the appliance unless they are constantly supervised.

- Children 8 years and older may only use the steam oven unsupervised if they have been shown how to use it safely and recognise and understand the consequences of incorrect operation.

- Children must not be allowed to clean the steam oven unsupervised.

- Please supervise children in the vicinity of the steam oven and do not let them play with it.

- Danger of suffocation. Packaging, e.g. plastic wrappings, must be kept out of the reach of babies and children. Whilst playing, children could become entangled in packaging or pull it over their head and suffocate.

- Danger of burning. Children's skin is far more sensitive to high temperatures than that of adults. Make sure that children do not attempt to open the door when the appliance is in operation. Keep children well away from the appliance until it has cooled down and there is no danger of burning.

- Danger of injury. The door can support a maximum weight of 8 kg. Do not let children sit on the door, lean against it or swing on it. They could injure themselves.
Warning and Safety instructions

Technical safety

Unauthorised installation, maintenance and repairs can cause considerable danger for the user. Installation, maintenance and repairs must only be carried out by a Miele authorised technician.

Radiation by microwaves:
Service or repairs which necessitate the removal of any casing must only be carried out by a suitably trained service technician.

Never use a damaged steam oven. It could be dangerous. Check it for visible signs of damage before using it.

Check the door and door seal for any sign of damage. If any damage is noticed, the oven should not be used again in Microwave mode until the fault has been rectified by a service technician.

Operating a damaged appliance can result in microwave leakage and present a hazard to the user. Do not use the appliance if:

- the door is warped,
- the front of the oven compartment is dented or bowed,
- the door hinges are loose,
- holes or cracks are visible in the casing, the door or the oven interior walls.
- there is moisture between the door panes.

Reliable and safe operation of this steam oven can only be assured if it has been connected to the mains electricity supply.

The electrical safety of this appliance can only be guaranteed when correctly earthed. It is essential that this standard safety requirement is met. If in any doubt please have the electrical installation tested by a qualified electrician.
Warning and Safety instructions

- Before connecting the appliance to the mains supply, ensure that the connection data on the data plate (voltage and frequency) match the mains electricity supply. This data must correspond in order to avoid the risk of damage to the appliance. Consult a qualified electrician if in any doubt.

- Do not connect the steam oven to the mains electricity supply by a multi-socket adapter or an extension lead. These do not guarantee the required safety of the appliance (fire hazard).

- For safety reasons, this steam oven may only be used when it has been built in. This is necessary to ensure that all electrical components are shielded.

- This steam oven must not be used in a non-stationary location (e.g. on a ship).

- Never open the casing of the appliance. Tampering with electrical connections or components and mechanical parts is highly dangerous to the user and can cause operational faults.

- While the appliance is under guarantee, repairs should only be undertaken by a Miele authorised service technician. Otherwise the guarantee is invalidated.

- Miele can only guarantee the safety of the appliance when genuine original Miele replacement parts are used. Faulty components must only be replaced by Miele spare parts.

- If the plug is removed from the connection cable or if the cable is supplied without a plug, the appliance must be connected to the electrical supply by a suitably qualified electrician.

- If the connection cable is damaged, it must be replaced by a suitably qualified electrician with a special connection cable of type H 05 VV-F (pvc insulated). See "Electrical connection".

- During installation, maintenance and repair work, the appliance must be disconnected from the mains electricity supply.
If the steam oven is installed behind a furniture panel (e.g. a door), ensure that the door is never closed whilst the steam oven is in use. Heat and moisture can build up behind a closed furniture panel and cause subsequent damage to the steam oven, the housing unit and the floor. Do not close the door until the steam oven has cooled down completely.

In areas which may be subject to infestation by cockroaches or other vermin, pay particular attention to keeping the appliance and its surroundings clean at all times. Any damage caused by cockroaches or other vermin will not be covered by the warranty.
Correct use

- **Danger of burning.** The steam oven becomes hot when in use.
  You could burn yourself on the heating elements, oven interior, cooked food, oven accessories or hot steam.
  Wear oven gloves when placing food in the oven or removing it and when adjusting oven shelves etc. in a hot oven.
  Take care when putting cooking containers into the oven or removing them not to spill the contents.

- **Danger of burning.** There will be some residual hot water in the steam generator at the end of a cooking process. This will be pumped back into the water container. Take care not to spill the contents when taking the water container out of the appliance.

- **Do not use the steam oven to heat up or bottle food in sealed jars and tins.**
  Pressure will build up inside them and they can explode causing damage to the appliance, as well as the risk of injury and scalding.

- **Plastic dishes which are not heat- and steam resistant melt at high temperatures and can damage the appliance.**
  Use temperature- (to 100 °C) and steam-resistant plastic dishes for steam cooking. Follow the manufacturer's instructions.

- **Food which is left in the oven to be kept hot can dry out and the moisture released can lead to corrosion damage in the appliance.**
  Do not use the steam oven for keeping food warm and do not use utensils in the appliance which could corrode.

- **You could injure yourself on the open steam oven door or trip over it.** Avoid leaving the door open unnecessarily.

- **The door can support a maximum weight of 8 kg.**
  Do not sit on or lean against an open door, and do not place heavy objects on it.
  Also make sure that nothing can get trapped between the door and the oven cavity. The steam oven could get damaged.
Warning and Safety instructions

► When using a small electrical appliance, e.g. a hand-held blender, near the steam oven, care should be taken that the cable of the appliance cannot get trapped by the steam oven door. The insulation on the cable could become damaged, giving rise to an electric shock hazard.

Microwave function

► Please be aware that durations when using microwave power are often considerably shorter when cooking, reheating and defrosting than when using functions without microwave power. Excessively long cooking times can lead to food drying out and burning or could even cause it to catch fire.

► The Microwave function can be used for heating food and drinks. Do not use the Microwave function for drying flowers, herbs, bread, rolls or other flammable materials which could catch fire and cause injury by burning.

► Always cover food when using Microwave mode.

► It is important that the heat is allowed to spread evenly throughout the food being cooked and that it is hot enough. This can be achieved by stirring and/or turning the food, and observing a sufficiently long standing time, which should be added to the time needed for cooking, reheating or defrosting.

► When heating food and drinks, remember that the heat is created in the food itself, and that the container will normally be cooler. The dish is only warmed by the heat of the food. Before serving, remember to allow a sufficient standing time and then always check the temperature of the food after taking it out of the steam oven. The temperature of the container is not an indication of the temperature of the food or liquid in it. This is particularly important when preparing food for babies, children, and the elderly or infirm. Shake or stir baby milk and food thoroughly after heating, and try it for temperature to ensure that it will not scald the baby.
Warning and Safety instructions

▶ Microwave mode is not suitable for cleaning or disinfecting items. Items can get extremely hot and there is a danger of burning when the item is removed from the appliance.

▶ Do not cook or reheat food or liquids in sealed containers, jars or bottles. With baby bottles, the screw cap and teat must be removed. Otherwise pressure will build up which can cause the bottle or container to explode, posing a severe risk of injury.

▶ When heating up liquids, always place a suitable glass rod or utensil into the cup or glass. When boiling and in particular when heating up liquids using microwave power, the boiling point of the liquid may be reached without the production of typical bubbles. The liquid does not boil evenly throughout. This so-called 'boiling delay' can cause a sudden build up of bubbles when the container is removed from the oven or shaken. This can lead to the liquid boiling over suddenly and explosively. The formation of bubbles can be so strong that the pressure forces the oven door open. Stir liquid before it heats up or boils. Once it has heated up wait for a minimum of 20 seconds before removing the container from the microwave oven.

▶ Eggs can be cooked without their shells using microwave power only if the yolk membrane has been punctured several times first. The pressure could otherwise cause the egg yolk to explode.

▶ Eggs in their shells will explode if cooked with microwave power, even after taking them out of the oven. They can only be cooked in their shells using the steam cooking function or in an appropriate automatic programme. Hard-boiled eggs must not be reheated with microwave power either as they too will explode.

▶ Food with a thick skin or peel, such as tomatoes, sausages, jacket potatoes and aubergines, should be pierced or cut in several places to allow steam to escape and prevent the food from bursting.
Warning and Safety instructions

- Do not use the microwave function 
  ![Microwave symbol] to heat up cushions or 
  pads filled with cherry kernels, wheat grain, lavender or gel, such as 
  those used in aromatherapy. These pads can ignite when heated 
  even after they have been removed from the oven.

- To avoid fuelling any flames, do not open the oven door if smoke 
  occurs inside the appliance. Interrupt the process by switching the 
  appliance off and disconnect it from the mains electricity supply. Do 
  not open the door until the smoke has dispersed.

- Dishes with hollow knobs or handles are not suitable for use with 
  microwave power. Moisture which has gathered in the hollow re- 
  cesses can cause pressure to build up and the item can explode. If 
  the hollow recess is sufficiently ventilated, the item could be used. 
  However, we recommend that you do not use such dishes in Mi-
  crowave mode.

- Fire hazard. Using microwave power with plastic dishes which are 
  not microwave safe can cause them to melt and damage the appli-
  ance. Do not use any containers or cutlery made from or containing 
  metal, aluminium foil, lead crystal glassware, temperature-sensitive 
  plastics, wooden utensils or cutlery, metal clips or plastic or paper 
  covered wire ties. Do not use bowls with milled rims, or plastic pots 
  with the foil lid only partially removed (see "Suitable containers for 
  microwave use).

- Do not leave the steam oven unattended when heating or cooking 
  food in disposable containers made of plastic, paper or other inflam-
  mable materials using the Microwave function ![Microwave symbol]. 
  Before using single-use containers make sure they are suitable for 
  microwave use. See "Suitable containers for microwave use - 
  Plastics".

- Do not heat food in the steam oven in heat-retaining bags which 
  are intended for use in normal ovens. 
  These heat-retaining bags usually contain a thin layer of aluminium 
  foil which reflects microwaves. This reflected energy can, in turn, 
  cause the outer paper covering to become so hot that it ignites.
The steam oven can suffer damage when using Microwave function if it is empty or incorrectly loaded. For this reason please do not use the Microwave function to pre-heat crockery or to dry herbs and do not start the Microwave function when the steam oven is empty.
Cleaning and care

▶ Do not use a steam cleaning appliance to clean this appliance. The steam could reach electrical components and cause a short circuit.

▶ Scratches on the door glass can result in the glass breaking. Do not use abrasive cleaners, hard sponges, brushes or sharp metal tools to clean the door glass.

▶ The side runners can be removed for cleaning purposes (see "Cleaning and care"). Ensure that they are replaced correctly and do not use the oven without them fitted.

▶ The side runners fit into plastic bushes. Check the bushes carefully for damage. If the bushes are damaged, do not use any Microwave functions until the bushes have been replaced.

▶ Try to avoid the interior walls being splashed with food or liquids containing salt. If it does happen, wipe these away thoroughly to avoid corrosion to stainless steel surfaces inside the cabinet.

Accessories

▶ Only use genuine original Miele accessories and spare parts with this appliance. Using accessories or spare parts from other manufacturers will invalidate the warranty and Miele cannot accept liability.
Caring for the environment

Disposal of the packing material
The packaging is designed to protect the appliance from damage during transportation. The packaging materials used are selected from materials which are environmentally friendly for disposal and should be recycled.

Recycling the packaging reduces the use of raw materials in the manufacturing process and also reduces the amount of waste in landfill sites.

Disposing of your old appliance
Electrical and electronic appliances often contain valuable materials. They also contain specific materials, compounds and components, which were essential for their correct function and safety. These could be hazardous to human health and to the environment if disposed of with your domestic waste or if handled incorrectly. Please do not, therefore, dispose of your old appliance with your household waste.

Please dispose of it at your local community waste collection / recycling centre for electrical and electronic appliances, or contact your dealer or Miele for advice. You are also responsible (by law, depending on country) for deleting any personal data that may be stored on the appliance being disposed of. Please ensure that your old appliance poses no risk to children while being stored prior to disposal.

Accessories supplied

The accessories supplied with your appliance as well as a range of optional ones are available to order from Miele (see "Optional accessories").

The steam cooking containers and rack supplied are not suitable for use in Microwave mode.

**DMGS 1/1-30L**

1 glass condensate tray
To catch excess moisture in Steam cooking mode.
375 x 394 x 30 mm (W x D x H)

**Always** use the glass tray to place items on when using the Microwave function.

Do not place items weighing more than 8 kg on it.

Do not place the hot glass tray on a cold surface, such as a tiled or granite worktop. The glass tray could get damaged. Place the hot tray on a suitable heat-resistant mat or pot rest.

**DGG 1/2-40L**

1 solid cooking container
Gross capacity 2.2 litres / Usable capacity 1.6 litres
375 x 197 x 40 mm (W x D x H)

**DGGL 1/2-40L**

2 perforated cooking containers
Gross capacity 2.2 litres / Usable capacity 1.6 litres
375 x 197 x 40 mm (W x D x H)

**DMSR 1/1L**

1 rack for placing your own cooking containers on

**Descaling tablets**

For descaling the appliance

</thead>
</table>
| ⚡️ | For switching the oven interior lighting on and off | If the time of day display is visible, the oven interior lighting can be switched on and off by touching the ⚡️ sensor, for example when cleaning the oven.  
If the display is dark, the ⚡️ sensor will not react until the steam oven is switched on.  
The oven interior lighting switches off after 15 seconds during a cooking process or remains constantly switched on, depending on the setting selected. |
| ’≡ | For accessing settings | Touching the ’≡ sensor when the steam oven is switched on will bring up a list of settings.  
If the display is dark, the ’≡ sensor will not react until the steam oven is switched on.  
During a cooking process you can alter the temperature or set a cooking duration after touching this sensor. |
| 💧 | Popcorn | Microwave mode starts with 850 W and a duration of 2:45 minutes (see "Popcorn").  
This function can only be used when no other cooking programme is in use. |
| 🌟 | Quick MW | The oven starts with maximum power (1000 W) and a duration of 1 minute (see "Quick MW").  
Touching the sensor repeatedly increases the duration in stages.  
This function can only be used when no other cooking programme is in use. |
Controls

Display

The display is used for showing the time of day or information about functions, temperatures, cooking durations, automatic programmes, user programmes and settings.

Information or a list of options will appear in the display depending on the function selected and/or touching the ‘≡’ sensor.

After switching the steam oven on with the On/Off ⏹️ sensor you will be prompted to Select function.

If you have not selected a function, the settings option list will appear in the display when you touch the ‘≡’ sensor.

If a function has been selected (except for Automatic programmes ✡️) and the settings have been entered for the cooking programme, the list of options for that cooking programme will appear when you touch the ‘≡’ sensor.

■ To select an option scroll through the list with the ∧ and ∨ arrow sensors until the option you want is highlighted.

■ Then confirm the selection with OK.
## Symbols

The following symbols may appear in the display:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>⬆️</td>
<td>If two or three options are available arrows will appear on the right hand side of the display. Use these to scroll through the list. Available options are highlighted one after the other.</td>
</tr>
<tr>
<td>⬇️</td>
<td>If more than three options are available, a bar will appear on the right-hand side of the display. Use this to scroll through the list.</td>
</tr>
<tr>
<td>⬊️ ⬊️ ⬊️ ⬊️ ⬊️ ⬊️ ⬊️ ⬊️ ⬊️ ⬊️</td>
<td>The end of a list is indicated by a dotted line. By scrolling down further, you reach the beginning of the list again.</td>
</tr>
<tr>
<td>✓</td>
<td>A tick indicates the option which is currently selected.</td>
</tr>
<tr>
<td>📰</td>
<td>This symbol indicates that there is additional information and advice about using the oven. Select OK to access the information.</td>
</tr>
<tr>
<td>⌁</td>
<td>Minute minder</td>
</tr>
<tr>
<td>⬊️ ⬊️ ⬊️ ⬊️ ⬊️ ⬊️ ⬊️</td>
<td>Some settings, e.g. display brightness and buzzer volume are selected using a bar chart.</td>
</tr>
</tbody>
</table>
Steam cooking mode

Water container
The maximum water level is 1.5 litres, the minimum 0.5 litres. These levels are indicated on the container. Do not exceed the maximum level.

The amount of water used will depend on the type of food and the duration of cooking. Water will sometimes need to be replenished during the cooking programme. Water consumption is increased if the door is opened during cooking.

At the end of the cooking programme hot residual water in the steam generator is pumped back into the water container. The water container must be emptied after each use.

The water container is removed using a push/pull system: push gently on the water container to remove it.

Temperature
Some functions have a default recommended temperature. This recommended temperature can be altered within the given range for the programme or programme stage in use, or for every time that programme is used (see "Settings - Recommended temperatures"). Temperatures can be changed in 5 °C steps, or in 1 °C steps for Sous-vide cooking.

Duration
You can set a duration between 1 minute (0:01) and 10 hours (10:00). If the duration exceeds 59 minutes you have to enter it in hours and minutes. Example: duration 80 minutes = 1:20.

Noises
You will hear a pumping sound when the appliance is switched on, during use and after switching it off. This is the sound of water being pumped through the system and is quite normal.

When the steam oven is in use, you will hear a fan noise.

Heating-up phase
During the heating-up phase the display will show the temperature in the cooking compartment as it rises and Heating phase in all programmes except for Automatic programmes and Maintenance.

When cooking with steam, the duration of the heating-up phase will depend on the quantity and the temperature of the food. In general the heating-up phase will last for approx. 5 minutes. The duration will be longer if you are cooking refrigerated or frozen food.

Cooking phase
The cooking phase begins when the set temperature is reached. During the cooking phase, the duration remaining will be shown in the display.
Steam reduction

If a cooking temperature above approx. 80 °C has been set, the appliance door will automatically open a fraction just before the end of a cooking programme to release some of the steam from the cabinet. Steam reduction will appear in the display. The door will then close again automatically.

Steam reduction can be switched off if you wish (see "Settings - Steam reduction"). If switched off there will be a lot of steam emitted from the cabinet when the door is opened.

Microwave power

How it works

In the steam oven with microwave there is a high-frequency tube called a magnetron. This converts electrical energy into microwaves. These microwaves are distributed evenly throughout the oven interior, and rebound off the metal sides of the oven interior to reach the food from all sides.

In order for microwaves to reach the food, they must be able to penetrate the cooking utensil being used. Microwaves can penetrate porcelain, glass, cardboard and plastics, but not metal. Do not, therefore, use utensils made of metal, or which contain metal, for example in the form of gold or silver trim. The metal reflects the microwaves and this could cause sparking. The microwaves cannot be absorbed.

Microwaves pass through a suitable container and find their way directly into the food. All food contains moisture molecules which, when subjected to microwave energy, start to oscillate 2.5 thousand million times a second. The friction caused by this vibration creates heat, which first starts developing around the outside of the food and then slowly penetrates towards the centre. The moisture, fat and sugar content of food will affect the speed at which it is cooked. The heat is generated in the food itself.

Advantages

Food can generally be cooked without adding much liquid or cooking oil.
Suitable containers for microwave use

Microwaves are reflected by metal, pass through glass, porcelain, plastic and card, and are absorbed by food.

⚠️ Fire hazard.
Non-microwave safe dishes can suffer damage or damage the steam oven.

The material and shape of the containers used affect cooking results and times. Heat distribution is more even in round and oval shaped flat containers than in rectangular containers, providing better results.

Suitable containers for microwave use

Glassware
Heat-resistant glass or ceramic dishes are ideal for use with microwave power.

Exception: Do not use crystal glass as it contains lead which can crack or shatter with microwave power.

Porcelain
Porcelain is a suitable material.

Exception: Do not use porcelain with gold rims or cobalt blue or items with hollow knobs or handles, as insufficient ventilation may cause a build-up of pressure.

Earthenware
Decorated earthenware is only suitable if the decoration is beneath an all-over glaze.
Description of functions

⚠️ Danger of burning.
Earthenware can get very hot and may crack.
Wear protective gloves when removing dishes from the steam oven.

Plastics
Plastic containers and plastic disposable containers may only be used with the Microwave function if they have been declared as suitable for microwave use by the manufacturer. To protect the environment it is best to avoid using single-use containers.

Do not leave the steam oven unattended when reheating or cooking food in disposable containers made of plastic, paper or other flammable materials.

Plastics must be heat-resistant to a minimum of 110 °C. Otherwise the plastic may melt and fuse with the food.
When cooking food with fat, or food containing fat, do not use plastic containers. Use only glass or porcelain.

- Plastic microwave containers
These are readily available from retail outlets.
- Styrofoam containers
Disposable containers, such as trays made from polystyrene, can only be used for very short, timed warming and reheating of food.

- Plastic "Boil-in-the-bag" bags
Plastic boiling bags can be used for cooking and reheating. They should be pierced beforehand so that steam can escape.
This prevents a build-up of pressure and reduces the risk of the bag bursting.
There are also special steaming bags available which do not need to be pierced. Please follow instructions given on the packet.

- Roasting bags and tubes
Please follow the manufacturer's instructions when using roasting bags and tubes.

⚠️ Fire hazard.
Do not use metal clips, plastic clips containing metal parts, or paper ties containing wire. There is a danger that they will ignite when heated.

- Melamine containers
Melamine is not suitable for use in this oven. Melamine absorbs microwave energy and gets hot. When purchasing plasticware, make sure that it is suitable for use in a microwave oven.
Description of functions

Unsuitable containers for microwave use

⚠️ Dishes with hollow knobs or handles are not suitable for use with microwave power. Moisture which has gathered in the hollow recesses can cause pressure to build up and the item can explode. If the hollow recess is sufficiently ventilated, the item could be used. However, we recommend that you do not use such dishes in Microwave mode.

Metal

Metal reflects microwaves and obstructs the cooking process.

Do not use metal containers, aluminium, foil, metal cutlery and china with metallic decoration such as gold rims or cobalt blue with the Microwave function 📌.

Transfer ready meals in aluminium foil dishes into a microwave safe container for a more even heat distribution.

⚠️ Do not use the cooking containers and the rack supplied with microwave functions.

Glazes and colours

Some glazes and colours contain metal and are therefore unsuitable for microwave functions.

Wood

Wooden dishes are not suitable. Moisture contained in the wood evaporates when exposed to microwave energy, causing the wood to dry and crack.

Placing the dish in the oven

- Place the condensate tray on the lowest shelf level.
- The dish containing the food should always be placed in the middle of the condensate tray.

Placing the food directly on the floor of the oven would give unsatisfactory and uneven results as the microwaves would not be able to reach the food from below.

Do not use containers where the foil lid has not been completely removed as small pieces of foil can cause sparking.
Description of functions

Cover
A cover:
- prevents too much steam escaping, especially when cooking foods which need longer to cook.
- speeds up the cooking process.
- prevents food from drying out.
- helps keep the oven interior clean.

The cover should not form a seal with the container. If the cover is used with a container which only has a narrow diameter, there might not be enough room for condensation to escape through the holes in the side of the cover. The cover could get too hot and could start to melt.

⚠️ Do not cook or reheat food or liquids in sealed containers, jars or bottles. With baby bottles, the screw cap and teat must be removed. Otherwise pressure builds up which can cause the bottle or container to explode, posing a severe risk of injury.

When using the Microwave function (دائئ) always cover the food with a lid or cover made of microwave safe glass or plastic.

Covers are available from retail outlets.
Alternatively, use a clingfilm recommended for use in a microwave oven (pierce as instructed by the manufacturer). Heat can cause normal clingfilm to distort and fuse with the food.
Description of functions

Condensate tray
Using with steam:
When using perforated containers, place the condensate tray on the lowest shelf level to collect any drops of liquid and allow them to be removed easily.

The condensate cannot evaporate properly if the condensate tray is on the floor of the steam oven.
Place the condensate tray on the lowest shelf level.

Microwave functions:
Always use the glass condensate tray on the lowest shelf level to place cooking containers on.

Oven interior lighting
For energy saving reasons, the oven compartment lighting has been set at the factory to go out after the programme has begun.

If you want it to stay on all the time the oven is on you will need to alter the default setting (see “Settings - Lighting”).

If the door is left open at the end of a cooking programme the oven lighting will switch off automatically after 5 minutes.

The lighting can be switched on for 15 seconds by pressing the button on the control panel.
Before using for the first time

General settings

⚠️ The steam oven must not be operated until it has been correctly installed in its housing unit.

The steam oven will switch on automatically when it is connected to the electricity supply.

Welcome screen

A welcome greeting is displayed. You will then be asked to select some basic settings which are needed before the appliance can be used.

- Follow the instructions in the display.

Set the language

- Scroll through the list until the language you want is highlighted.
- Confirm with OK.

Select the country

- Scroll through the list until the country you want is highlighted.
- Confirm with OK.

Set the date

- Set the year, month and then the day.
- Confirm each with OK.

Set the time of day

- Set the hours and the minutes.
- Confirm each with OK.

The time of day can be displayed in 12 hour format (see "Settings - Time of day - Clock format").

Time of day display

You will then be asked how you want the time of day to show in the display when the steam oven is switched off (see "Settings - Time of day - Display"):  
- **On**
  The time always shows in the display.
- **Off**
  The display appears dark to save energy. Some functions are limited.
- **Night dimming**
  The time only shows in the display between 5:00 and 23:00. It switches off at night to save energy.

- Scroll through the list until the option you want is highlighted.
- Confirm with OK.

Some information about energy consumption will appear in the display.

- Confirm with OK.

Set up successfully completed will appear.

The steam oven is ready for use.

If you have selected the wrong language by mistake proceed as described in "Settings - Language ".

- Please stick the extra data plate for the appliance supplied with this documentation in the space provided in the "After sales service" section of this booklet.
- Remove any protective wrapping and stickers.
Before using for the first time

The appliance has undergone a function test in the factory. Residual water from this testing may have trickled back into the cabinet during transportation.

Cleaning for the first time

Water container

- Take the water container out of the appliance.
- Remove the spill guard.
- Wash the water container by hand.

Accessories / Oven interior

- Take all accessories out of the oven.
- Wash the accessories in a mild solution of washing-up liquid and hot water or in the dishwasher.

The interior of the steam oven has been treated at the factory with a conditioning agent.

- To remove this, clean the oven interior with a mild solution of washing-up liquid and hot water.

Set the water hardness level

The steam oven is set ex-works for Hard water. It must be adjusted to local water hardness to ensure trouble-free operation and to ensure that descaling is carried out at the correct interval. The harder the water, the more often it will need to be descaled.

- Check the hardness of your local water supply and adjust the water hardness as necessary (see "Settings - Water hardness").
Before using for the first time

Set the correct boiling point for water

Before cooking food for the first time, you must set the boiling point for water, as this varies depending on the altitude the appliance is located at. This procedure also flushes out the waterways.

This procedure must be carried out to ensure efficient functioning of your appliance.

Only use cold mains tap water (less than 20 °C). Never use distilled or mineral water or other liquids.

- Remove the water container and fill it up to the maximum marker.
- Push the water container into the appliance until it connects.
- Run the Steam cooking programme at 100 °C for 15 minutes. Proceed as described in "Operation: Steam cooking".

Set the correct boiling point for water following a house move

If you move house, the appliance will need to be re-set for the new altitude if this differs from the old one by 300 m or more. To do this, descale the appliance (see "Cleaning and care / Maintenance / Descaling").

Operation: Steam cooking

Simple operation

- Switch the steam oven on using ①.
  Select function appears in the display.

Only use cold mains tap water (less than 20 °C). Never use distilled or mineral water or other liquids.

- Fill the water container and push it into the appliance until it connects.
- Place the food in the oven.
- Select Steam cooking ④.

Set the temperature appears in the display.
- Change the recommended temperature if necessary.
- Confirm with OK.

The recommended temperature will be automatically accepted within a few seconds.
If required, select 退出 to go back to the temperature selection option.

- Set the duration appears in the display.
  - Set the cooking duration. Any time between 1 minute and 10 hours can be set.
  - Confirm with OK.

The cooking programme begins. The steam generator, lighting and fan switch on.
- Set further settings as necessary (see "Advanced operation")
If you are cooking at a temperature above approx. 80 °C, Steam reduction will appear in the display shortly before the end of the cooking time and the door will automatically open a little.

**At the end of the cooking duration**
- **Prog. finished** appears in the display,
- the fan remains switched on,
- a tone or melody will sound (see "Settings - Acoustic tones")

You have the option of saving your settings as a User programme (see "User programmes") or increasing the cooking duration via ‘≡’.

⚠️ **Danger of burning.**
You could burn yourself on the oven interior walls, spilled food and accessories
Use oven gloves when removing hot food from the oven.

- Wait until **Steam reduction** goes out in the display before opening the door and removing the food.
- Switch the steam oven off using ①.

A new cooking programme can only be started if the automatic door release is retracted into its original position. Do not push it in manually as this could damage it.

**After use**
- Remove the condensate tray and empty it.
  ⚠️ **Danger of burning.**
The residual water in the water container is hot.
Take care not to tip the water container when taking it out of the appliance.

- Remove the water container.
- Remove the spill guard and empty the water container.
- After each use, clean and dry the whole appliance as described in "Cleaning and care".
- Leave the appliance door open until the oven interior is completely dry.

**Insufficient water**
If water needs replenishing during the programme a tone will sound and a reminder to refill the container will appear in the display.

- Remove the water container and fill it with fresh tap water.
- Push the water container into the appliance until it connects.

Operation will continue.
Operation: Steam cooking

Interrupting operation

Operation is interrupted as soon as the door is opened. The heating will be switched off and the cooking duration remaining stored in memory.

⚠️ Danger of burning.
Steam can escape when the door is opened.
Step back and wait until the steam has dissipated.

⚠️ Danger of burning.
You could burn yourself on the oven interior walls, spilled food and hot steam.
Use oven gloves when placing food in the oven or removing it and when adjusting oven shelves etc. in a hot oven

Operation will resume when the door is closed.

When the door is closed, the pressure has to equalise, which can cause a whistling sound.

The oven will heat up again and the display will show the temperature of the cooking compartment as it rises.
Once the set temperature has been reached, the display will change to show the cooking duration remaining as it counts down.

The cooking programme will finish early if the door is opened in the last minute of cooking (55 seconds duration remaining).
Advanced operation

Setting further durations
You have placed the food in the oven, selected a temperature and a duration.

■ Touch '≡'.

Further options will appear in the display which you can select or change for your programme:

– Ready at
– Start at

You can set the programme to switch off or on and off automatically by setting Ready at or Start at.

– Ready at
  You specify the time you want cooking to stop.
– Start at
  You specify the time you want cooking to start.

Cooking results can be impaired if there is a long delay between the food being placed in the oven and the start of cooking. Fresh food can change colour and even deteriorate.

If the temperature in the oven is too high, e.g. just after another programme, you will not be able to use this function. Ready at / Start at will not appear in the display if this is the case. Open the oven door until the appliance has cooled down.

Switching on and off automatically
To switch a cooking programme on and off automatically you have a choice of how to enter the time parameters:

– Duration and Ready at
– Duration and Start at

Example: it is 11:45. The food takes 5 minutes to cook and should be ready at 12:30.

■ Touch '≡'.

■ Scroll through the list until Duration is highlighted.
■ Confirm with OK.
■ Set "00:05" and confirm with OK.
■ Scroll through the list until Ready at is highlighted.
■ Confirm with OK.
■ Scroll through the list until Change is highlighted.
■ Confirm with OK.
■ Set "12:30" and confirm with OK.

Start at is calculated automatically. The cooking duration entered is added to the heating-up time calculated by the steam oven.

Start at 12:18 appears in the display. The cooking programme will start automatically at this time.
**Sequence of an automatic programme**

**Up until the start** the function, the selected temperature, Start at and the start time will appear in the display.

**After the start** during the heating-up phase you can follow the temperature increasing in the display. When the required temperature is reached a tone or a melody will sound (see "Settings - Acoustic tones").

**After the heating-up phase** you can follow the time counting down in the display. The last minute counts down in seconds.

**Shortly before the end of the cooking duration** if you are cooking at a temperature above approx. 80 °C, Steam reduction will appear in the display and the door will automatically open a little.

**At the end** the steam generator will switch off. A tone or melody will sound (see "Settings - Acoustic tones"). Prog. finished will appear in the display.

You have the option of saving your settings as a User programme (see "User programmes") or increasing the cooking duration via *⇌*.

**Changing settings during a cooking programme**

- Touch *⇌*.

The following will appear in the display:

- Temperature
- Duration
- Ready at
- Start at

If the temperature in the oven is too high Ready at and Start at are not displayed.

**Changing the temperature**

- Scroll through the list until Temperature is highlighted.
- Confirm with OK.
- Change the temperature.
- Confirm with OK.

The programme will restart with the new temperature.

You can permanently reset the recommended temperature to suit your personal cooking preferences. (See "Settings - Recommended temperatures").
Changing the cooking duration

- Scroll through the list until Duration is highlighted.
- Confirm with OK.
- Change the duration.
- Confirm with OK.

The programme will restart with the new duration.

Changing the finish time

- Scroll through the list until Ready at is highlighted.
- Confirm with OK.
- Scroll through the list until Change is highlighted.
- Confirm with OK.
- Change the duration.
- Confirm with OK.

Start at will be automatically recalculated. The programme will finish at the time set.

Deleting a finish time

- Scroll through the list until Ready at is highlighted.
- Confirm with OK.
- Scroll through the list until Delete is highlighted.
- Confirm with OK.

The cooking finish time is deleted. The programme will start using the duration set.

Changing the function

You can change the cooking function during operation.

- Select the function you want.
- Change function? or Cancel cooking? will appear in the display.
- Scroll through the list until Yes is highlighted.
- Confirm with OK.
- Set the cooking duration.
- Confirm with OK.

The function has been changed.

Cancelling cooking

- Touch ↪.

Cancel cooking? appears in the display.

- Scroll through the list until Yes is highlighted.
- Confirm with OK.

Select function will appear in the display. Any cooking durations set are deleted.
**Operation: Microwave function**

**Simple operation**
- Switch the steam oven on using 🔄.
- Select function appears in the display.
- Place the dish with the food in the centre of the condensate tray on the bottom shelf.
- Select Microwave 🍝.
- Set the power level appears in the display.
- Change the recommended power level if necessary.
- Confirm with OK.
- Set the duration appears in the display.
- Set the cooking duration.

The maximum duration that can be set depends on the microwave power level selected.

- Confirm with OK.
- Select Start.

The magnetron, lighting and cooling fan will come on and the cooking programme will start.

- Set further settings as necessary (see "Advanced operation")

You can interrupt the cooking programme at any time with Stop.

**At the end of the cooking duration**
- **Prog. finished** appears in the display,
- the fan remains switched on,
- a tone or melody will sound (see "Settings - Acoustic tones")

You have the option of saving your settings as a User programme (see "User programmes") or increasing the cooking duration via 🍝.

⚠️ Danger of burning.
You could burn yourself on the oven interior walls, spilled food and crockery.
Use oven gloves when removing hot food from the oven.

- Take the food out of the oven.
- Switch the steam oven off using 🔄.
Operation: Microwave function

After use

- After each use, clean and dry the whole appliance as described in "Cleaning and care".

- Leave the appliance door open until the oven interior is completely dry.
Operation: Microwave function

Advanced operation

Setting further durations
You have placed the food in the oven, selected a microwave power level and set the duration.

- Touch ‘≡’.

Further options will appear in the display which you can select or change for your programme:
- Ready at
- Start at

You can set the programme to switch on and off automatically by setting Ready at or Start at.

- Ready at
  - You specify the time you want cooking to stop.
- Start at
  - You specify the time you want cooking to start.

Cooking results can be impaired if there is a long delay between the food being placed in the oven and the start of cooking. Fresh food can change colour and even deteriorate.

Switching on and off automatically

To switch a cooking programme on and off automatically you have a choice of how to enter the time parameters:
- Duration and Ready at
- Duration and Start at

Example: it is 11:45. The food takes 5 minutes to cook and should be ready at 12:30.

- Touch ‘≡’.

- Scroll through the list until Duration is highlighted.
- Confirm with OK.
- Set "5:00" and confirm with OK.

- Scroll through the list until Ready at is highlighted.
- Confirm with OK.

- Scroll through the list until Change is highlighted.
- Confirm with OK.
- Set "12:30" and confirm with OK.

Start at is calculated automatically.

Start at 12:25 appears in the display. The cooking programme will start automatically at this time.
Sequence of an automatic programme

Up until the start the function, the selected power level, Start at and the start time will appear in the display.

After the start you can follow the time counting down in the display. The time counts down in seconds.

At the end of the programme the magnetron will switch off. A tone or melody will sound (see "Settings - Acoustic tones"). Prog. finished will appear in the display.

You have the option of saving your settings as a User programme (see "User programmes") or increasing the cooking duration via ‘≡’.

Changing settings during a programme

Touch ‘≡’.

The following will appear in the display:

- Power level
- Duration
- Ready at
- Start at

Changing the microwave power level

Scroll through the list until Power level is highlighted.

Confirm with OK.

Change the microwave power level

Confirm with OK.

Select Start.

The programme will restart with the new microwave power level.

You can permanently reset the recommended power level to suit your personal cooking practices. See "Settings - Recommended power levels".

Changing the cooking duration

Scroll through the list until Duration is highlighted.

Confirm with OK.

Change the duration.

Confirm with OK.

Select Start.

The programme will restart with the new duration.
Operation: Microwave function

Changing the finish time

- Scroll through the list until Ready at is highlighted.
- Confirm with OK.
- Scroll through the list until Change is highlighted.
- Confirm with OK.
- Change the duration.
- Confirm with OK.

Start at will be automatically recalculated. The programme will finish at the time set.

Deleting a finish time

- Scroll through the list until Ready at is highlighted.
- Confirm with OK.
- Scroll through the list until Delete is highlighted.
- Confirm with OK.
- Select Start.

The cooking finish time is deleted. The programme will start using the duration set.

Changing the function

You can change the cooking function during operation.

- Select the function you want.

Change function? or Cancel cooking? will appear in the display.

- Scroll through the list until Yes is highlighted.
- Confirm with OK.

The new function will appear in the display.

- Change the recommended temperature or power level if necessary.
- Confirm with OK.
- Set the cooking duration.
- Confirm with OK.

The function has been changed.

Cancelling cooking

- Touch ↵.

Cancel cooking? appears in the display.

- Scroll through the list until Yes is highlighted.
- Confirm with OK.

Select function will appear in the display. Any cooking durations set are deleted.
Your steam oven has a wide range of Automatic programmes to enable you to achieve excellent results with ease. Simply select the appropriate programme for the type of food you are cooking and follow the instructions in the display.

**List of food types**

Automatic programmes are accessed via **Automatic programmes**

- Vegetables
- Fish
- Rice
- Hen’s eggs
- Fruit
- Shellfish
- Special

**To use an Automatic programme**

- Select **Automatic programmes**.

A list of food types will appear in the display.

- Scroll through the list until the category you want is highlighted.

- Confirm with OK.

The Automatic programmes available for the food type selected will then appear.

- Scroll through the list until the Automatic programme you want to use is highlighted.

- Confirm with OK.

Each step you need to take before starting the Automatic programme will appear in the display.

In some programmes you will be prompted on when to add food to the oven. Follow and confirm these instructions.
Automatic programmes

Notes on use

– The degree of doneness and browning levels are shown in a bar with seven segments. The factory default is always the middle setting. It will be highlighted. To change the setting simply move the highlighting to the left or the right.

– The weight entry in the Automatic programmes refers to the weight per piece. For example, you can cook just one piece of salmon weighing 250 g or 10 pieces of salmon, each weighing 250 g at the same time.

– The oven interior needs to be at room temperature before starting an Automatic programme.

– When placing food in an already hot steam oven, be very careful when opening the door. Hot steam can escape. Step back from the steam oven and wait until the steam has dissipated. When putting cooking containers or the condensate tray into the oven or taking them out, take care not to spill the contents. Avoid contact with hot steam, and do not touch the hot oven interior walls. Danger of burning and scalding.

– For some Automatic programmes the start time can be delayed using Start at or Ready at.

– To end an automatic programme early, you do not need to switch the steam oven off completely. Touch .

When Cancel cooking? appears, select Yes.

– If by the end of an Automatic programme the food is not cooked enough, select Continue cooking.

– Automatic programmes can also be saved as User programmes via .
You can create and save up to 20 of your own programmes.

- Each one can have up to 10 cooking stages. This enables you to save your favourite or most frequently used recipes very accurately. In each stage you can select individual settings.
- You can enter the name of the programme for your recipe.

When you next select the programme it will start automatically.

There are different ways of creating a User programme:

- At the end of an Automatic programme, save it as a User programme.
- After running a programme with a set duration, save it.

Then name the programme.

**To create a User programme**

- Select User programmes.

If you have not yet created a User programme Create programme will appear in the display.

- Confirm with OK.

If User programmes already exist, the programme names will appear with Edit programme underneath them.

- Scroll through the list until Edit programme is highlighted.
- Confirm with OK.

Create programme will be highlighted.

- Confirm with OK.

You can now specify the settings for cooking stage 1.

Follow the instructions in the display:

- Select and confirm the cooking function, temperature or microwave power level and duration.

Settings for the 1st cooking stage have now been set.

You can add more cooking stages, for example, if you want to add another cooking function to follow on from the first:

- Scroll through the list until Add cooking stage is highlighted.
- Confirm with OK.

- Proceed as for the 1st cooking stage.

- When all necessary cooking stages have been set, scroll through the list until Finish programme is highlighted.
- Confirm with OK.
A summary of your settings will appear in the display.

- Check the settings and confirm with OK.
- Scroll through the list until Save is highlighted.
- Confirm with OK.
- Enter the programme name.

The following symbols will appear next to the alphabet:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Space</td>
</tr>
<tr>
<td>ABC</td>
<td>Alphabet in upper case</td>
</tr>
<tr>
<td>abc</td>
<td>Alphabet in lower case</td>
</tr>
<tr>
<td>123</td>
<td>Numerals 0 to 9 and hyphen</td>
</tr>
<tr>
<td>✓</td>
<td>Confirm the programme name</td>
</tr>
</tbody>
</table>

- Scroll through the list until the character you want is highlighted.
- Confirm with OK.

The letter or number you have selected will appear in the top line of the display.

- Select the rest of the letters or numbers for your programme name.

A maximum of 10 characters can be used.

You can delete the characters one at a time with ↵.

- Once you have entered the programme name scroll through the list until ✓ is highlighted.
- Confirm with OK.

A message will appear in the display confirming that the programme has been saved.

- Confirm with OK.

You can start the saved programme immediately, delay the start or change the cooking stages.

The option Change cooking stages is described in "To change a User programme".
To start a User programme

1. Place the food in the oven.
2. Select User programmes.

The programme names will appear with Edit programme underneath them in the display.

3. Scroll through the list until the programme you want is highlighted.
4. Confirm with OK.

You can start the saved programme immediately, delay the start or change the cooking stages.

- Start now
  The programme will start. The steam generator or the magnetron will switch on immediately.

- Ready at
  You specify the time you want cooking to stop.

- Start at
  You specify the time you want cooking to start.

- Change cooking stages
  You can change the specified settings for a cooking stage or add more cooking stages to the programme (see "To change a User programme").
5. Scroll through the list until the function you want is highlighted.
6. Confirm with OK.

The programme will start according to the specified start or finish time.

To change a User programme

Changing cooking stages

Cooking stages in an Automatic programme that you have renamed as a User programme cannot be changed.

1. Select User programmes.

The programme names will appear with Edit programme underneath them in the display.

2. Scroll through the list until Edit programme is highlighted.
3. Confirm with OK.

4. Scroll through the list until Change programme is highlighted.
5. Confirm with OK.

6. Scroll through the list until the programme you want is highlighted.
7. Confirm with OK.

Change cooking stages will be highlighted.
8. Confirm with OK.

Cooking stage 1 is highlighted. You can change the specified settings for one cooking stage or add cooking stages to the programme.

9. Scroll through the list until the cooking stage you want or Add cooking stage is highlighted in the display.
10. Confirm with OK.

11. Change the programme as you wish (see "To create a User programme") and confirm with OK.

A summary of your settings will appear in the display.
User programmes

- Check the settings and confirm with OK.

  The additional stages or changes to your programme will be saved.

- Change the name if necessary (see "To create a User programme").

Changing the name

- Select User programmes.

  The programme names will appear with Edit programme underneath them in the display.

- Scroll through the list until Edit programme is highlighted.

- Confirm with OK.

- Scroll through the list until Change programme is highlighted.

- Confirm with OK.

- Scroll through the list until the programme you want is highlighted.

- Confirm with OK.

- Scroll through the list until Change name is highlighted.

- Confirm with OK.

- Change the name (see "To create a User programme").

- After entering a new name, scroll through the list until ✓ is highlighted.

- Confirm with OK.

A message will appear in the display confirming that the programme has been saved.

- Confirm with OK.
**To delete a User programme**

- **Select** User programmes 📀.

  The programme names will appear in the display and **Edit programme underneath**.

- **Scroll through the list until** Edit programme is highlighted.

- Confirm with OK.

- **Scroll through the list until** Delete programme is highlighted.

- Confirm with OK.

- **Scroll through the list until** the programme you want is highlighted.

- Confirm with OK.

Delete ? appears in the display.

- **Scroll through the list until** Yes is highlighted.

- Confirm with OK.

The programme is deleted.

---

You can delete all User programmes at once (see "Settings - Factory default - User programmes").
Quick MW

If you touch the Quick MW sensor the oven will start with a set power level and duration, e.g. to reheat a drink.

The maximum power level of 1000 W and a maximum duration of 1 minute are pre-set.

**Tip:** You can alter the power level and the duration. The maximum duration will depend on the power level selected (see "Settings – Quick MW").

The Quick MW function can only be used when no other cooking programme is in use.

- Touch  
  Touching it repeatedly increases the duration in set stages.

The cooking programme will begin. The cooking duration (time remaining) starts to count down immediately.

You can interrupt the cooking programme at any time with Stop and cancel it with  

**At the end of the cooking duration**

- Prog. finished appears in the display,
- a tone or melody will sound (see "Settings - Acoustic tones")
With the "Popcorn" sensor the microwave starts with a set microwave power and cooking duration.

The power level is pre-set at 850 W and the duration at 2:45 minutes. This is suitable for most brands of microwave popcorn.

**Notes on use**

- The oven interior must be cool and dry in order for the popcorn to pop completely.
- Take note of the manufacturer's instructions on the packaging. Change the pre-set duration if necessary. You can set a duration of up to max. 4 minutes (see "Settings - Popcorn"). The microwave power level cannot be altered.

The Popcorn function can only be used when no other cooking programme is in use.

- Place the condensate tray on the lowest shelf level and place the microwave popcorn on it, taking note of the manufacturer's instructions.

- Touch [ ].

The cooking programme will begin. The cooking duration (time remaining) starts to count down immediately.

You can interrupt the cooking programme at any time with Stop and cancel it with [ ].

Do not leave the steam oven unattended during this programme and make sure you follow the instructions on the packaging.

**At the end of the cooking duration**

- Prog. finished appears in the display,
- a tone or melody will sound (see "Settings - Acoustic tones")
The minute minder can be used to time other activities in the kitchen, e.g. boiling eggs.

The minute minder can also be used at the same time as a cooking programme in which the start and finish times have been set, e.g. as a reminder to stir a dish or add seasoning etc.

A maximum minute minder duration of 9 hours, 59 minutes and 55 seconds can be set.

**To set the minute minder**

| If you want to use the minute minder and Time | Show | Off has been set, you will need to switch the steam oven on before you can set the minute minder. The minute minder can then be seen counting down in the display when the steam oven is switched off. |

Example: You want to boil some eggs and set a minute minder duration of 6 minutes and 20 seconds.

- Touch ．

0:00:00 will appear in the display (h:min:sec). The hour block will light up.

- Confirm with OK.

The hours are saved and the minutes block will light up.

- Touch one of the arrow sensors repeatedly until "06" appears.

- Confirm with OK.

The minutes are saved and the seconds block will light up.

- Touch one of the arrow sensors repeatedly until "20" appears.

- Confirm with OK.

The duration counts down in the display when the oven is switched off.

If a cooking programme is being run at the same time the minute minder duration will appear in the bottom of the display.

**At the end of the minute minder duration**

- ． will flash in the display,

- the display will show the time counting upwards,

- a tone or melody will sound (see "Settings - Acoustic tones")

- Touch ． to switch off acoustic and optical signals.
To change the duration

- Touch ⬆.

Minute minder appears in the display and Change is highlighted.

- Confirm with OK.
- Set a new minute minder duration.
- Confirm with OK.

The altered minute minder duration will start to count down immediately.

To cancel the duration

- Touch ⬆.

Minute minder appears in the display and Change is highlighted.

- Scroll through the list until Delete is highlighted.
- Confirm with OK.

The minute minder duration is now cancelled.
General notes on steam cooking

This section contains general information on steam cooking. You will find more detailed information about particular foods and how to cook them in the other sections.

The advantages of cooking with steam

Almost all vitamins and minerals are retained as the food is not immersed in water.

Cooking with steam also retains the true taste of the food better than conventional cooking. We therefore recommend seasoning the food after it has been cooked. Food also retains its fresh, original colour.

Suitable containers

Cooking containers

This steam oven is supplied with stainless steel cooking containers. Other containers, in a variety of sizes, both perforated and solid, are available as optional extras (see "Optional accessories"). This enables you to choose the most suitable container for the food you are cooking.

It is best to use perforated containers for steam cooking. The steam can reach the food from all sides and the food is cooked evenly.

Your own containers

You can also use your own containers. However, please note the following:

- Containers must be heat-resistant to 100 °C and able to withstand hot steam. With plastic containers please check with the manufacturer that they are suitable for use in a steam oven.

- Thick-sided containers made from porcelain, china or stoneware, for example, are not so suitable for steam cooking. They do not conduct heat well and as a result cooking durations will be considerably longer than those given in the charts.

- Place the cooking containers on the rack and not on the oven floor.

- Ensure that there is a gap between the upper rim of the container and the top of the cooking compartment to allow sufficient steam into the container.

Condensate tray

When using perforated containers, place the condensate tray on the lowest shelf level to collect any drops of liquid and allow them to be removed easily.

The condensate cannot evaporate properly if the condensate tray is on the floor of the steam oven.

Place the condensate tray on the lowest shelf level.
General notes on steam cooking

Shelf level
You can select any shelf level for the cooking containers and the rack. You can also cook on several levels at the same time. This will not alter the cooking duration.

When using more than one deep container at the same time for steam cooking it is best to offset them on their runners and to leave at least one level free in between them.

Always insert cooking containers, the rack and the condensate tray between the rails of the side runners so that they cannot tip.

Frozen food
The heating up phase for frozen food is longer than for fresh food. The greater the quantity of frozen food, the longer the heating up phase.

Temperature
A maximum temperature of 100 °C is reached when steam cooking is taking place. Most types of food will cook at this temperature. Some more delicate types of food, such as soft fruit, must be cooked at lower temperatures as otherwise they will burst. More information is given in the relevant section.

Combination with a food warming drawer
When the warming drawer is in use the oven cavity in the steam oven can get up to 40 °C. If, in this case, you set a temperature of 40 °C, no steam will be produced because the oven cavity is too warm.

Duration
In general, the cooking durations for cooking with steam are the same as for cooking food in a saucepan. More information about any factors which may affect the cooking duration is given in the relevant sections.

The quantity of food does not affect the cooking duration. 1 kg of potatoes will take the same time to cook as 500 g.

The durations given in the charts are guidelines only. We recommend selecting the shorter cooking duration quoted to start with. If food is not cooked sufficiently after the shorter time it can be put back in the oven and cooked for longer.

Cooking with liquid
When cooking with liquid only fill the cooking container \( \frac{2}{3} \) full to prevent the liquid spilling when the cooking container is removed from the oven.

Your own recipes
Food which is cooked in a pot or a pan can also be cooked in the steam oven. The cooking times in the steam oven will be the same. Please note that food will not be brown or crisp when cooking with steam.
Steam cooking

Vegetables

Fresh
Prepare fresh vegetables in the usual way, i.e. wash, clean and cut them up.

Frozen
Frozen vegetables do not need to be defrosted beforehand, unless they have been frozen together in a block.

Frozen and fresh vegetables which take the same length of time to cook can be cooked together.

Break up vegetables that have frozen together in a lump and follow instructions on the packaging regarding cooking duration.

Cooking containers
Food such as peas or asparagus spears, which have little or no space between them, will take longer to cook because the steam has less space to work in. For an even result, it is best to use a shallow container for these types of food, and only fill it about 3-5 cm deep. When cooking large quantities divide the food between 2 or 3 shallow containers rather than using one deep one.

Different types of vegetables which take the same length of time to cook can be cooked together.

Use solid containers for vegetables which are cooked in liquid.

Shelf level
To avoid any colour transfer when cooking vegetables with a distinctive colour (e.g. beetroot) in a perforated container, do not place other food underneath the perforated container.

Duration
As with conventional methods, the cooking duration when cooking vegetables with steam will depend on the size and how well done you want them. Example:
firm potatoes, cut into quarters = approx. 17 minutes
firm potatoes, cut in half = approx. 21 minutes

☀️ Duration
Steam cooking

Meat

Fresh
Prepare the meat in the usual way.

Frozen food
Meat should be thoroughly defrosted before cooking in the steam oven (see "Defrosting with steam").

Preparation
For meat which needs to be seared before being cooked, e.g. for a stew, sear the meat in a pan on the hob first.

Duration
The cooking duration depends on the thickness and the texture of the meat, and not on the weight. The thicker the piece of meat, the longer the cooking duration. A piece of meat weighing 500 g which is 10 cm thick will take longer to cook than a piece of meat weighing 500 g which is 5 cm thick.

Tips
– Use a perforated container to retain the juices when cooking meat. Place a solid container underneath to catch the juices. You can use these to make a gravy or freeze them for later use.

– Boiling fowl, back or top rib and meat bones can be used to make stock. Place the meat together with some mixed vegetables in a solid cooking container and add cold water and cook. The longer the cooking duration, the stronger the stock.

Fish

Fresh
Prepare fresh fish in the usual way, i.e. clean, gut and fillet.

Frozen food
Fish does not need to be fully defrosted before cooking. Defrost so that the surface is sufficiently thawed to take herbs and seasoning. Depending on the thickness of the fish, 2 - 5 minutes should be enough.

Preparation
Add some lemon or lime juice to fish before cooking. The citric acid helps the flesh stay firm.

It is not necessary to season fish with salt when cooking with steam as this method retains the minerals which give the fish its unique flavour.

Cooking containers
If using a perforated container, grease it first.

Shelf level
When cooking fish in a perforated container at the same time as cooking other types of food in other containers, place the container with the fish directly above the condensate tray/universal tray (depending on model) to catch any liquid and so avoid any transfer of tastes to other food.
Steam cooking

Temperature

85 °C – 90 °C
For gently cooking delicate types of fish, such as sole.

100 °C
For cooking firmer types of fish, e.g. cod and salmon. Also for cooking fish in sauce or stock.

Duration

The cooking duration depends on the thickness and the texture of the fish, and not on the weight. The thicker the fish, the longer the cooking duration. A 3 cm thick piece of fish weighing 500 g will take longer to cook than a 2 cm thick piece of fish weighing 500 g.

The longer fish cooks, the firmer its flesh will become. Use the cooking durations given in the chart. If you find that the fish is not cooked sufficiently only cook it for a few minutes more.

When cooking fish in sauce or stock, we recommend that you increase the cooking duration quoted by a few minutes.

Tips

– Adding herbs and spices, such as dill, will help bring out the full flavour of the fish.

– Cook large fish in the swimming position. To help maintain the shape of the fish, place a small cup or similar upside down in the cooking container, and arrange the fish bellyside down over the cup.

– You can use any fish scraps, e.g. fish heads, bones, tails etc to make a fish stock. Place the fish scraps together with some mixed vegetables in a solid cooking container and add cold water. Cook at 100 °C for 60 to 90 minutes. The longer the cooking duration, the stronger the stock.

– Blue fish is fish which is cooked in water and vinegar. It is important not to damage the skin of the fish. This method is suitable for cooking carp, trout, tench, eel and salmon. (Follow recipe instructions for the ratio of water to vinegar).

Mussels

Fresh

⚠️ Warning - danger of food poisoning
Only cook mussels which are closed. Do not eat mussels which have not opened after being cooked.

Steep fresh mussels in water for a few hours before cooking to rinse out any sand. Then scrub the mussels thoroughly to clean them.

Frozen food
Defrost frozen mussels before cooking.

Duration
The longer mussels are cooked, the tougher they become. Use the cooking durations given in the chart.

Steam cooking

Rice

Rice swells when cooked and needs to be cooked in liquid. The proportion of rice to liquid will vary depending on the type of rice.

The rice absorbs all the liquid and so none of the nutrients are lost.

Steam cooking

Pasta

Dry pasta
Dry pasta swells when it is cooked and needs to be cooked in liquid. The liquid must cover the pasta. Using hot liquid gives better results.

Increase the cooking time stated by the manufacturer by approx. $\frac{1}{3}$.

Fresh
Fresh pasta, such as you can buy from the supermarket chilled counter, does not need to absorb water. Cook fresh pasta in a greased perforated container.

Separate any pieces of pasta which have stuck together and spread them out in the cooking container.

Duration
Steam cooking

Hen's eggs

Use a perforated container to boil eggs in the steam oven.

The eggs do not need to be pierced before cooking as they are gradually warmed during the heating up phase and so do not burst when they are cooked with steam.

When using a solid container for making egg dishes such as scrambled eggs, remember to grease it first.

☀ Duration
Steam cooking

Menu cooking (cooking whole meals)

Before cooking meals with the Menu cooking function switch off the steam reduction system (see “Settings - Steam reduction”).

You can use the steam oven to cook a whole meal containing types of food which have different cooking durations, e.g. fish fillet with rice and broccoli. Each dish is placed in the oven at different times so that they are all ready at the same time.

Shelf level

When cooking fish or food with a distinctive colour (e.g. beetroot) in a perforated container, place the perforated container directly above the condensate tray / universal tray (depending on model) to avoid any transfer of flavour or colour to other food and to prevent liquid dripping onto food below it.

Temperature

Whole meals should be cooked at a temperature of 100 °C as this is the temperature required to cook the majority of foods.

Do not cook a whole meal at the lowest temperature when different temperatures are required for different types of food, e.g. 85 °C for seabream and 100 °C for potatoes.

If the recommended cooking temperature for the food is 85 °C for example, try cooking it at 100 °C and testing the result. Some delicate types of fish with a soft structure, e.g. sole and plaice will become very firm when cooked at 100 °C.

Duration

If you are increasing the recommended temperature, shorten the cooking duration by approx. $\frac{1}{3}$.

Example

<p>| | | |</p>
<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>Setting</td>
<td>14 min.</td>
<td>2 min.</td>
<td>4 min.</td>
</tr>
</tbody>
</table>
Procedure
- Place the rice in the oven first.
- Set the first cooking duration: 14 minutes.
- After 14 minutes, place the fish in the steam oven.
- Set the second cooking duration: 2 minutes.
- After 2 minutes, place the broccoli in the steam oven.
- Set the third cooking duration: 4 minutes.
With this gentle cooking method, food is cooked slowly and at a low, constant temperature in vacuum packaging.

With vacuum cooking, no moisture evaporates during cooking and all nutrients and flavours are retained.

The cooking result has an intensive taste and food is cooked evenly.

Use only fresh food which is in a good condition.
Ensure hygienic conditions and that food has not been out of the refrigerator too long, e.g. during transportation.

Use only heat-stable, boiling-resistant vacuum sealing bags.
Do not cook food in the sales packaging, such as vacuum-packed frozen food as it is possible that the packaging used is not suitable for vacuum cooking.
Do not use the vacuum sealing bag more than once.

Vacuum-seal the food in a chamber system vacuum sealer only.
Important

For an optimum cooking result:

– Use fewer herbs and spices than for conventional cooking as the effect on the taste of the food is more intensive.
   You can also prepare the food without seasoning and add seasoning after cooking.

– The cooking duration is reduced when salt, sugar, and liquids are added.

– The food becomes firmer if acidic ingredients, such as lemon or vinegar are added.

– Do not use alcohol or garlic as this can cause an unpleasant taste.

– Only use vacuum sealing bags that match the size of the food. If the bag is too big, too much air may remain inside.

– If you want to cook several items of food in one vacuum sealing bag, put them side-by-side in the bag.

– If you want to cook food in several bags at once, put the bags side-by-side on the shelf.

– The cooking durations depend on the thickness of the food.

– With higher temperatures and/or longer cooking durations, a lack of water may occur. Check the display from time to time.

– Keep the door closed during the cooking programme. Opening the door extends the programme and can change the cooking result.

– Cooking at a lower temperature and for a longer duration can result in increased residual water in the cooking compartment. This does not affect the cooking result.

– Temperatures and cooking durations from Sous-vide recipes cannot always be adopted exactly. Alter the settings to achieve the degree of cooking you want.
Sous-vide (vacuum) cooking

Tips

- To reduce preparation times, you can vacuum food 1–2 days before cooking. Store the vacuum sealed food in the refrigerator at a maximum temperature of 5 °C. To maintain quality and taste, the food must be cooked after a maximum of 2 days.

- Freeze liquids such as marinades before vacuum-sealing to prevent them from escaping from the bag.

- Fold the edges of the vacuum sealing bag outwards for filling in order to obtain clean, perfect seams.

- If you do not want to eat the food directly after cooking, put it in iced water to cool down completely. Then store it at a maximum temperature of 5 °C. In this way, you can maintain quality and taste while extending the life of the food.

  **Exception:** Consume poultry immediately after cooking.

- After cooking, cut the vacuum sealing bag on all sides for easier access to the food.

- Briefly fry meat and firm types of fish (such as salmon) before serving for a roasted aroma.

- Use the brine or marinade of vegetables, fish, or meat to make a sauce.

- Serve the food on pre-warmed plates.
### Procedure

- Rinse the food with cold water and dry it.
- Place the food in a vacuum sealing bag and add spices or liquid if desired.
- Vacuum-seal the food in a chamber system vacuum sealer.
- For optimum cooking results place the rack on shelf level 2.
- Place the vacuum-sealed food on the rack (next to each other if there are several bags).
- Place the condensate tray on the lowest shelf level.
- Select Further programmes.
- Scroll through the list until Sous-vide is highlighted.
- Confirm with OK.
- Change the recommended temperature if necessary.
- Confirm with OK.
- Set the cooking duration. Any time between 1 minute and 10 hours can be set.
- Confirm with OK.
- Select further settings if required (see "Operation: Steam cooking - Advanced operation").

### Possible reasons for unsatisfactory results

**The bag has opened:**
- The seal was not clean or strong enough and has opened.
- The bag was damaged by a sharp bone.

**The food has an unpleasant or strange taste:**
- Incorrect storage of the food; the food was kept out of the refrigerator for too long.
- The food was contaminated with bacteria before it was vacuum sealed.
- Too much of ingredients such as spices was added.
- The bag or seal was not in perfect order.
- The vacuum was insufficient.
- The food was not eaten or chilled immediately after cooking.

* Degree of doneness

The "Done" degree of doneness uses a higher core temperature than "Medium". Results are not the same as for well done in traditional roasting methods.
Sous-vide (vacuum) cooking

Reheating

Only reheat brassicas, e.g. kohlrabi and cauliflower in combination with a sauce. Without sauce, an unpleasant cabbage-like taste and grey-brown colour may develop.

Food with a short cooking duration or which continues cooking during reheating, e.g. fish, is not suitable for reheating.

Preparation

Place the cooked food into ice water for approx. 1 hour directly after cooking. The rapid cooling prevents the food from continuing to cook, which helps retain the optimum cooked condition. Then store the food in the refrigerator at a maximum temperature of 5 °C.

Please note that the quality of the food decreases the longer it is stored.

We recommend that you do not store the food in the refrigerator for longer than 5 days before reheating.

</tbody>
</table>

° Temperature/° duration

1 Degree of doneness
   The "Done" degree of doneness uses a higher core temperature than "Medium". Results are not the same as for well done in traditional roasting methods.

2 Durations apply to vacuum-sealed food with an initial temperature of approx. 5 °C (refrigerator temperature).

3 Reheat only in sauce.
Reheating with steam

To reheat food which was cooked using the Sous-vide method, use the Sous-vide function (see "Sous-vide (vacuum) cooking – Reheating").

The steam oven is very effective at reheating food gently, without drying it out or cooking it further. The food will reheat evenly and does not need to be stirred during the reheating process.

You can reheat individual dishes or plated meals which have been prepared previously (e.g. meat, vegetables and potatoes).

Suitable containers

Small quantities can be reheated on a plate, larger quantities should be placed in a cooking container.

Duration

The number of plates or containers has no bearing on the duration.

The cooking durations listed in the chart relate to an average portion per plate/container. Increase the cooking duration for larger quantities.

Tips

- Do not reheat large items, such as a joint of roast meat, whole. Divide it into portions and reheat these as plated meals.
- Compact items, such as stuffed peppers or roulades, should be cut in half.
- Please note that breaded items, such as schnitzel, will not retain their crispness when they are reheated.
- Reheat sauces separately, except for dishes such as stew and casseroles where the sauce is part of the dish.

Procedure

- Cover the food with a deep plate, a lid, or with foil that is resistant to temperatures up to 100 °C and to steam.
- Then place the plate on the rack in the oven.

Special applications

Defrosting with steam

It is much quicker to defrost food in the steam oven than at room temperature.

Temperature

60 °C is the best temperature for defrosting.
Exception: 50 °C for minced meat and game

Before and after defrosting

Remove all packaging before defrosting.
Exceptions: Leave bread, biscuits and cakes in their packaging as otherwise they will absorb moisture and become soft.

Allow defrosted food to stand at room temperature after removing it from the oven. The standing time is necessary to allow the even distribution of heat.

Cooking containers

⚠️ Danger of salmonella poisoning.
Do not use the liquid from defrosted meat or poultry. Pour it away and wash the container, the sink and your hands.

Use a perforated container with a solid container underneath it when defrosting food which will drip, such as poultry. This way food will not be lying in defrosted liquid.

Food which does not drip can be defrosted in a solid container.

Tips

– Fish does not need to be fully defrosted before cooking. Defrost so that the surface is sufficiently thawed to take herbs and seasoning. Depending on the thickness of the fish, 2 - 5 minutes should be enough.

– When defrosting food which has frozen together, e.g. berries, chops, fish fillets etc. separate it about halfway through the defrosting time.

– Do not refreeze food once it has thawed.

– Defrost frozen pre-cooked meals according to the manufacturer's instructions.

*imeInterval* Temperature / ✂️ Duration / ✤ Standing time
Special applications

Bottling

Only use unblemished, fresh produce which is in good condition for bottling.

Glass jars

Use clean glass jars and accessories and check them for any defects. Glass jars with twist off lids or glass lids with a rubber seal are suitable.

Make sure that all the jars are the same size so that bottling is carried out evenly.

After you have filled the jars with the bottled produce, clean the glass rims with a clean cloth and hot water and then seal the jars.

Fruit

Sort fruit carefully, rinse it briefly but thoroughly and allow it to drain. Take great care when cleaning soft fruit as it is very delicate and squashes easily.

Remove any peel, stalks, cores or stones. Cut up large fruit. For example, cut apples into slices.

If you are bottling fruit with stones (e.g. plums, apricots) without removing the stones, pierce the fruit several times with a fork or wooden skewer as otherwise it will burst.

Vegetables

Rinse, clean and cut up vegetables.

Vegetables should be blanched before bottling to help them retain their colour (see " Blanching ").

Fill volume

Fill the glass jars with produce up to a maximum of 3 cm below the rim. Do not pack it down as this will damage the cell walls of the produce. Tap the jar gently onto a cloth to help distribute the contents evenly. Fill the jars with liquid. The produce must be completely covered.

Use a sugar solution for fruit and a salt or vinegar solution for vegetables.

Tips

– Make use of residual heat by leaving the jars in the oven for 30 minutes after it has switched off.

– Then cover the jars with a cloth and allow to cool for approx. 24 hours.
Special applications

Procedure
- Place the rack on the lowest shelf level.
- Place the jars on the rack (all the same size). Ensure that they do not touch one another.

Special applications

Extracting juice with steam

This appliance is ideal for extracting juice from soft and medium firm fruit.

It is best to use overripe fruit, as the riper the fruit the greater the quantity of juice produced. Very ripe fruit will also produce a more intense flavour.

Preparation
Sort and clean the fruit. Cut out any blemishes.

Remove the stalks from grapes and morello cherries as these are bitter. The stalks do not need to be removed from raspberries etc.

Cut larger fruit into chunks approx. 2 cm in size. The harder the fruit the smaller the pieces should be.

Tips
- Try experimenting with mild and tart fruit.
- Adding sugar will increase the quantity of juice produced and improve the flavour. Sprinkle the fruit with sugar and leave to absorb for a few hours before juicing. For 1 kg of sweet fruit add 50–100 g of sugar, and for 1 kg of tart fruit add 100–150 g of sugar.
- If you wish to bottle the juice rather than consume it straight away, pour it whilst hot into hot, sterilised bottles, and then seal immediately with sterilised tops.

Procedure
- Put the prepared fruit (cleaned, washed, chopped etc.) into a perforated cooking container.
- Place a solid container or the condensate tray underneath to catch the juice.

Settings
Steam cooking
Temperature: 100 °C
Duration: 40–70 minutes
Make yoghurt

To make yoghurt, you will need either fresh live yoghurt or yoghurt culture, obtainable from health food shops.

Use natural yoghurt with live culture and without additives. Heat-treated yoghurt is not suitable.

The yoghurt must be fresh (short storage time).

You can use either unchilled long-life or fresh milk. Long-life milk can be used without any further treatment. Fresh milk must first be heated to 90 °C and then cooled down to 35 °C. Do not boil it. Fresh milk will give a better set than long-life milk.

The yoghurt and milk should have the same percentage fat.

Do not move or shake the jars whilst the yoghurt is thickening.

Immediately after preparation leave the yoghurt to cool in the fridge.

How well home prepared yoghurt sets will depend on the consistency, fat content and the cultures used in the starter yoghurt. Not all yoghurts are suitable for use as starter yoghurt.

Possible reasons for unsatisfactory results

**Yoghurt has not set:**
Incorrect storage of starter yoghurt, too much time out of the refrigerator, e.g. in transportation, damaged packaging, milk not sufficiently heated.

**Liquid has separated:**
The jars were moved, yoghurt was not cooled down quickly enough.

**Yoghurt is gritty:**
Milk was overheated or in poor condition, milk and starter yoghurt not evenly stirred.

**Tip:** When using yoghurt enzyme, yoghurt can be made from a milk / cream mixture. Mix \( \frac{3}{4} \) litre milk with \( \frac{1}{4} \) litre cream.
Special applications

Procedure

- Mix 100 g yoghurt with 1 litre of milk or make up the mixture with yoghurt enzyme, following the instructions on the packaging.
- Pour the mixture into jars and seal the jars.
- Place the sealed jars in a perforated cooking container or on the rack. Ensure that they do not touch one another.
- Immediately after the yoghurt has been made, place the jars in the refrigerator, taking care not to shake them unnecessarily.

Steam cooking | Temperature: 90 °C
Duration: 1 minute

Melt chocolate

You can use the steam oven for melting any type of chocolate.

Procedure

- Break the chocolate into small pieces. Leave chocolate cake covering in its packaging, and place in a perforated cooking container.

- Place large quantities in a solid cooking container and small quantities in a cup or a bowl.

- Cover the container or the dish with a lid or with foil that is resistant to temperatures up to 100 °C and to hot steam.

- Stir large quantities once halfway through cooking.

Settings

or

Steam cooking | Temperature: 65 °C
Duration: 20 minutes
Skinning vegetables and fruit

Procedure

■ Cut a cross in the top of tomatoes, nectarines etc. This will allow the skin to be removed more easily.

■ Place the fruit/vegetables in a perforated cooking container.

■ To blanch almonds, it is important to plunge them into cold water as soon as they are taken out of the oven, otherwise the skin cannot be removed.

Settings

Apple storage

You can treat homegrown apples in the steam oven to increase the length of time for which you can store them. Once treated, the apples will keep for 5 to 6 months when stored in a dry, cool and well-ventilated place. This method is only suitable for apples and not for other types of fruit.

Settings

Automatic programmes
or

Steam cooking
Temperature: 50 °C
Duration: 5 minutes
Special applications

Blanching
Blanch vegetables before freezing them. Blanching helps maintain the quality of the produce when it is frozen.

Blanching vegetables also helps them retain their original colour.

Procedure
- Put the prepared vegetables into a perforated cooking container.

- Once blanched, plunge the vegetables into ice cold water to cool them down quickly. Drain them well.

Cook bacon
The bacon does not brown.

Procedure
- Place the bacon (diced or rashers) in a solid cooking container.
- Cover the container with a lid or with foil that is temperature resistant up to 100 °C and to steam.

Settings
Automatic programmes Auto | Special | Cook bacon
or
Steam cooking Steam cooking
Temperature: 100 °C
Duration: 4 minutes

Disinfect items
The steam oven can be used to disinfect baby bottles and other containers so that at the end of the programme they are as germ free as they would have been had they been boiled. Check beforehand that all parts, teats etc. are declared by the manufacturer to be heat resistant to 100 °C and also that they can withstand hot steam.

Dismantle, clean and thoroughly rinse baby bottles. All parts of the bottles must be completely dry before they are reassembled to keep them germ free.

Procedure
- Place the individual items on the rack or in a perforated container (on their sides or with the opening facing downwards) ensuring that they do not touch one another to allow hot steam to reach them from all sides.
- Place the rack or container on the lowest shelf level.

Settings

Defrosting and reheating in combination mode

Food can be defrosted and reheated using a combination of steam and microwave power. To do this you will need to create a User programme (see "User programmes").

Defrosting and reheating food using a combination of steam and microwave power has the advantage that food

– is reheated faster than using only steam,
– will not overcook or dry out as it can with microwave power,
– can be defrosted and reheated in a single process,
– does not need to be stirred during the process.

Microwave function / Microwave power level

The duration required depends largely on the nature of the food, the amount and its initial temperature. Food that has been refrigerated, for example, takes longer to reheat than food at room temperature. Please refer to the relevant charts.
Microwave defrosting and reheating

Before defrosting and reheating

- Place food (including frozen) in a dish that is suitable for microwave use, and cover it.
- Place the dish in the centre of the condensate tray on the bottom shelf.

During the defrosting and reheating process

- Turn or stir the food several times. Stir the food from the outside towards the middle, as food heats more quickly from the outside.

After defrosting followed by reheating

- During the standing time the temperature is distributed evenly in the food.
- Allow the food to stand at room temperature for a few minutes to enable the heat to spread evenly throughout the food.

⚠️ Danger of burning.
After reheating food, especially food for babies and small children, stir the food or shake the container and check that the temperature does not pose any danger. Double check after it has been left to stand. Danger of burning.

⚠️ Danger of burning.
Be careful when removing dishes from the appliance. Although heat is not normally produced in the container itself by the microwaves (apart from stoneware), heat transfer from the food to the container may be considerable, making the container itself hot.

Use oven gloves when removing dishes from the oven.

- Always ensure that food is sufficiently cooked or reheated.
- If in any doubt that a sufficiently high temperature has been reached, continue cooking or reheating for a little longer.
Microwave defrosting and reheating

Tips on reheating

⚠️ Danger of burning. Food for babies and children must not be too hot. Only heat food for babies and children for 30-60 seconds at 450 W.

Pressure can build up when reheating in sealed containers, causing the container to explode. Do not cook or reheat food or liquids in sealed containers, jars or bottles. With baby bottles, the screw cap and teat must be removed. Otherwise pressure builds up which can cause the bottle or container to explode, posing a severe risk of injury.

Never reheat hard boiled eggs using the Microwave solo function even without the shell. The eggs can explode.

When heating liquids, milk, sauces etc, using microwave power, the boiling point of the liquid may be reached without the production of typical bubbles. The liquid does not boil evenly throughout. This so-called 'boiling delay' can cause a sudden build-up of bubbles when the container is removed from the oven or shaken, which can lead to the liquid boiling over suddenly and explosively. The formation of bubbles can be so strong that the pressure forces the oven door open. To avoid this, stir liquid before heating it up. After heating it up wait for at least 20 seconds before removing the container from the oven. Placing a suitable glass rod or similar utensil in the container can help prevent it from boiling over.
## Microwave defrosting and reheating

</tr>
</tbody>
</table>

## Charts for defrosting and reheating food

The following notes apply to all charts:

- Take note of the recommended microwave power levels, durations and standing times. These take the consistency, the quantity and the initial temperature of the food into account.
- You are generally advised to select the middle duration.
- Place food on the condensate tray on the lowest shelf level.

[²] Microwave power / [³] Reheating duration / ¹ Standing time

¹) Allow the food to stand at room temperature for a few minutes to enable the heat to spread evenly throughout the food.

²) When heating liquids, milk, sauces etc, using microwave power, the boiling point of the liquid may be reached without the production of typical bubbles. The liquid does not boil evenly throughout. This so-called ‘boiling delay’ can cause a sudden build-up of bubbles when the container is removed from the oven or shaken, which can lead to the liquid boiling over suddenly and explosively. To avoid this, always wait a minimum of 20 seconds before removing the container from the oven and place a suitable glass rod or utensil into the cup or glass when heating liquids.

³) Durations apply for food with an initial temperature of approx. 5 °C. For food which is not normally stored in the fridge an initial temperature of approx. 20 °C is assumed. With the exception of baby food and delicate sauces, food should be heated to a temperature of 70–75 °C.
Settings

To open the Settings menu

■ Switch the steam oven on.

■ Touch ‘≡’.

The list of available settings will appear in the display.
This list is also available under Further programmes | Settings .

You can check them or change them.
A tick √ next to an option shows which setting is active.

Settings cannot be changed while a cooking programme is in progress.

Changing and saving settings

■ Touch ‘≡’.

■ Scroll through the list until the option you want is highlighted.

■ Confirm with OK.

■ Scroll through the list until the setting you want is highlighted.
Use the ▲ and ▼ arrow sensors to change settings with segment bars (e.g. volume).

■ Confirm with OK.

The setting is now saved.

■ Touch ⇐ to return to the previous menu or ‘≡’ to return to function selection.

* Factory default setting
Language

You can set the language and the country you want.

After selecting and confirming your choice, the language you have selected will appear in the display.

Tip: If you have selected the wrong language by mistake, select the symbol to get back to the Language menu.

Time of day

Display

Select how you want the time of day to show in the display when the steam oven is switched off:

- On

  The time of day always appears in the display. You can switch the lighting on and off or use the minute minder △, Quick MW ◇ and Popcorn ◊ functions by touching the relevant sensor.

- Off

  The display is switched off to save energy. The steam oven has to be switched on before you can use it. This also applies to using the following functions: the oven interior lighting ◇, Minute minder △, Quick MW ◇ and Popcorn ◊.

- Night dimming

  To save energy the time is only shown in the display between 5:00 and 23:00. The rest of the time it is not visible.

Clock format

You can select whether the time shows as a 24 h or 12 h clock.

- 24 h

  The time of day is shown in 24 hour clock format.

- 12 h

  The time of day is shown in 12 hour clock format.

Setting the time

Set the hours and the minutes.

If there is an interruption to the power supply, the current time of day will reappear once power has been restored. The time is stored in memory for about 200 hours.

Date

Set the date.

When the steam oven is switched off the date will only show if the following settings have been set: Time | Show | On or Night dimming (between 05:00 h and 23:00 h).
Settings

Lighting
- On
  The interior lighting is switched on during the entire cooking period.
- On for 15 seconds
  The oven lighting turns off 15 seconds after a programme starts. Touching † switches it on for another 15 seconds.

Display brightness
The display brightness is represented by a bar with seven segments.

- Select Darker or Brighter to change the brightness of the display.

Acoustic tones

Melody
At the end of a process, a melody will sound several times in intervals.
The volume of the melody is represented by a bar with seven segments.

Maximum volume is selected when all segments are filled. If none of the segments are filled the volume is switched off.

- Select Quieter or Louder, to adjust the volume.

Solo tone
At the end of a process, a continuous tone will sound for a period of time.
The pitch of this tone is represented by a segment bar.

- Select Lower or Higher, to change the pitch.
Keypad tone

The volume of the tone that sounds each time you touch a sensor is represented by a bar with seven segments.

Maximum volume is selected when all segments are filled. If none of the segments are filled the volume is switched off.

Select Quieter or Louder, to adjust the volume.

Units

Weight

- g
  Weight in Automatic programmes is set using grammes.

- lb
  Weight in Automatic programmes is set using pounds.

- lb/oz
  Weight in Automatic programmes is set using pounds and ounces.

Temperature

- °C
  The temperature is displayed in degrees Celsius.

- °F
  The temperature is displayed in degrees Fahrenheit.
Quick MW

The maximum power level of 1000 W and the maximum duration of 1 minute are pre-set for starting the microwave immediately.

- Power level
  The following power levels can be selected: 80 W, 150 W, 300 W, 450 W, 600 W, 850 W or 1000 W.

- Duration
  The maximum duration that can be set depends on the power level selected:
  80–300 W: maximum 10 minutes
  450–1000 W: maximum 5 minutes.

Popcorn

The power level is pre-set at 850 W and the duration at 2:45 minutes. This is suitable for most brands of microwave popcorn.

The duration can be altered if necessary. The power level cannot be changed.

- Duration
  The maximum duration that can be set is 4 minutes.

Keeping warm

Please note that delicate food, especially fish, can continue cooking whilst being kept warm.

Steam cooking

- On
  The keeping warm function is activated as standard with the Steam cooking function \[\text{[\text{III}]D}\], if a temperature above approx. 80 °C is selected. If food is not removed from the oven at the end of a programme, the keeping warm function will automatically start after approx. 5 minutes. Keeping warm will appear in the display and the food will be kept warm for approx. 15 minutes at a temperature of 70 °C. The keeping warm function is cancelled when the door is opened or if the sensors are touched.

- Off
  The keeping warm function has been deactivated.
Microwave

- On

The keeping warm function is activated as standard with the Microwave function [ ], if a power level of at least 450 W and a cooking duration of at least 10 minutes are selected. If food is not removed from the oven at the end of a programme, the keeping warm function will automatically start after approx. 5 minutes. Keeping warm will appear in the display and the food will be kept warm for approx. 15 minutes using a power level of 150 W. The keeping warm function is cancelled when the door is opened or the sensors are touched.

- Off

The keeping warm function has been deactivated.

Steam reduction

- On

If a temperature above approx. 80 °C was used for cooking, the steam oven door will automatically open slightly shortly before the end of the cooking duration. This is to prevent a large amount of steam escaping when the door is opened. The door will close again automatically.

- Off

If steam reduction is switched off the Keeping warm function is also automatically switched off. If steam reduction is switched off a large amount of steam will escape when the door is opened.
**Recommended temperatures**

If you cook with different temperatures often it makes sense to change the recommended temperatures.

Once the option has been selected the list of functions and special applications with the relevant recommended temperatures will appear in the display.

- Select the function / special application you want.
- Confirm with OK.

The recommended temperature will appear together with the range within which it can be changed.

- Change the recommended temperature.
- Confirm with OK.

**Recommended power levels**

If you cook with different recommended power levels often it makes sense to change the recommended microwave power levels.

Once the option has been selected the list of functions and special applications with the relevant recommended power levels will appear in the display.

- Select the function / special application you want.
- Confirm with OK.

The recommended temperature will appear together with the range within which it can be changed.

- Change the recommended power level if necessary.
- Confirm with OK.
**Safety**

**System lock _SECURE**

The system lock prevents the appliance being switched on by mistake.

The minute minder can still be used when the system lock is active.

The system lock will remain activated even after a power failure.

- **On**
  
  The system lock is now active. If you want to use the steam oven press the OK sensor for at least 6 seconds.

- **Off**
  
  The system lock is not active. You can use the steam oven as normal.

**Sensor lock**

The sensor lock prevents the oven being switched off by accident or settings being altered whilst food is cooking. Once activated, the sensor lock prevents the sensors working a few seconds after a programme has been started.

- **On**
  
  The sensor lock is activated. OK must be touched for at least 6 seconds before the sensors can be used again. The sensor lock is then deactivated for a short period.

- **Off**
  
  The sensor lock is deactivated. All sensors react to touch as normal.
**Water hardness**

The steam oven is set ex-works for Hard water. It must be adjusted to local water hardness to ensure trouble-free operation and to ensure that descaling is carried out at the correct interval. The harder the water, the more often it will need to be descaled.

- **Soft**
  
  < 8.4 °dH, < 1.5 mmol/l

- **Medium**
  
  8.4 - 14 °dH, 1.5 - 2.5 mmol/l

- **Hard**
  
  > 14 °dH, > 2.5 mmol/l

**Showroom programme**

This function enables the steam oven to be demonstrated in showrooms without heating up. It should not be set for domestic use.

**Demo mode**

If demo mode is activated Demo mode active. The appliance will not heat up will appear when the steam oven is switched on.

- **On**
  
  Touch OK for at least 4 seconds to activate demo mode.

- **Off**
  
  Touch OK for at least 4 seconds to deactivate demo mode. The steam oven can then be used as normal.
Factory default

- Settings
  Any settings that you have altered will be reset to the factory default setting.

- User programmes
  All user programmes will be deleted.

- Recommended settings
  Power levels which have been changed will be reset to the factory default settings.

- Recommended temperatures
  Recommended temperatures which have been changed will be reset to the factory default settings.
Note for test institutes

Test food in accordance with EN 60350-1 (Steam cooking function)

<table>
<thead>
<tr>
<th>Test food</th>
<th>Cooking containers</th>
<th>Quantity [g]</th>

</tbody>
</table>

1) Use the condensate tray to place food containers on.

2) Allow the test food to stand at room temperature for a few minutes to enable the heat to spread evenly throughout the food.
Important information on cleaning and care

⚠️ Danger of injury.
The steam from a steam cleaning appliance could reach electrical components and cause a short circuit. Do not use a steam cleaner to clean the steam oven.

All surfaces can become discoloured or damaged if unsuitable cleaning agents are used. The front of the steam oven, in particular, will be damaged by oven cleaners. All surfaces are susceptible to scratching. Scratches on glass surfaces could cause a breakage in certain circumstances. Remove any residual cleaning agent immediately.

Stubborn soiling could damage the steam oven in certain circumstances. Clean the oven interior, inside of the door and door seal as soon as the oven has cooled down. Waiting too long can make cleaning unnecessarily difficult and in some cases impossible.

Check the door and door seal for any sign of damage. If any damage is noticed, the oven should not be used again in Microwave mode until the fault has been rectified by a service technician.

Allow the appliance to cool down to a safe temperature before cleaning.

- The appliance and accessories should be cleaned and dried thoroughly after each use.
- Leave the appliance door open until the oven interior is completely dry.

If the appliance is not going to be used for a longer period of time, e.g. whilst on holiday, it should be thoroughly cleaned and dried beforehand to prevent the build-up of odours etc. Leave the door open afterwards.
Unsuitable cleaning agents

To avoid damaging the surfaces, do not use:

– cleaning agents containing soda, ammonia, acids or chlorides
– cleaning agents containing descaling agents
– abrasive cleaning agents, e.g. powder cleaners and cream cleaners
– solvent-based cleaning agents
– stainless steel cleaning agents
– dishwasher cleaner
– glass cleaning agents
– cleaning agents for ceramic hobs
– hard, abrasive brushes or sponges, e.g. pot scourers, brushes or sponges which have been previously used with abrasive cleaning agents
– melamine eraser blocks
– sharp metal scrapers or tools
– wire wool
– stainless steel spiral pads
– spot cleaning
– oven sprays.

Appliance front

Soiling that is left too long might become impossible to remove and could cause external surfaces to alter or discolour. Remove any soiling immediately.

- Clean the front with a solution of warm water and a little washing-up liquid applied with a clean sponge or cloth. A clean, damp microfibre cloth without cleaning agent can also be used.
- After cleaning dry the front of the appliance with a soft cloth.
Cleaning and care

Oven interior

- Remove:
  - condensate using a sponge or absorbent cloth,
  - light, greasy soiling with a sponge and a solution of washing-up liquid and hot water.

- After cleaning wipe with clean water to remove any detergent residues.

- Then dry the oven interior and the inside of the door with a cloth.

Automatic door release

Ensure that the door opener does not become soiled with food residues.

- Wipe away soiling immediately with a clean sponge and a solution of washing-up liquid and hot water.

- After cleaning, wipe the surface with a damp cloth to remove any cleaning agent residues.

Water container

- Remove and empty the water container after every cooking process with steam, taking out the spill guard before emptying.

- Rinse the water container by hand and then dry it to prevent limescale.

Accessories

All accessories are dishwasher safe.

Condensate tray, rack and cooking containers

- Wash and dry the condensate tray, rack and cooking containers after each use.

- Any bluish discolouration on the cooking containers can be removed with vinegar. Then rinse with clean water.
Side runners

The side runners are suitable for cleaning in a dishwasher.

- Pull the side runners out first from the side 1, then from the back 2 of the steam oven.
- The side runners can be cleaned in the dishwasher or by hand with a solution of warm water and a little washing-up liquid applied with a clean sponge.
- Push the side runners firmly back in after cleaning. When putting them back in, make sure they are correctly inserted (see illustration).

⚠️ The side runners fit into plastic bushes. Check the bushes carefully for damage. If the bushes are damaged, do not use any microwave functions until the bushes have been replaced.

Maintenance

The Ready at and Start at functions are not available in the Maintenance programme.

Soak

Stubborn soiling can be soaked using this programme.

- Allow the oven interior to cool down.
- Remove all accessories from the oven.
- Fill the water container.
- Select Further programmes | Maintenance.
- Confirm with OK.
- Scroll through the list until Soak is highlighted.
- Confirm with OK.

The soaking process takes approx. 10 minutes.
Cleaning and care

Descaling

We recommend using Miele descaling tablets for descaling the appliance (see "Optional accessories"). These have been specially developed for Miele appliances to optimise the descaling process. Other descaling agents, which contain other acids besides citric acid and/or other undesirable substances, such as chlorides, for example, could damage the steam oven. Moreover, the descaling effect required could not be guaranteed if the descaling solution was not of the appropriate concentration.

Descaling solution is acidic.
Do not spill descaling agent onto metal surfaces. This can cause marks to appear.
However, should any descaling agent get onto these surfaces, wipe it away immediately.

The steam oven needs to be descaled after a certain number of operating hours. When the steam oven needs to be descaled, a number will appear in the display indicating the number of cooking processes remaining before the appliance locks out. Only cooking processes using steam are counted. After the last remaining cooking process, the appliance will lock out.

We recommend that you descale the appliance before it locks out.

During the descaling process the water container must be emptied, rinsed out and refilled with fresh water and the condensate container must be emptied.

- Switch the steam oven off and select Further programmes | Maintenance | Descale.

A message will appear in the display:
- Fill the water container with cold fresh tap water up to the level marker and drop 2 Miele descaling tablets in it.
- Push the water container into the appliance until it connects.
- Confirm with OK.

The descaling process will now begin and the time remaining will count down in the display.

It is only possible to cancel the descaling process during the first 6 minutes. Do not switch the appliance off during the descaling process. If it is switched off before the end of the process, the whole process will have to be started from the beginning again.

The water container will need emptying and refilling with fresh tap water twice during descaling.
- Follow the instructions in the display.
- Confirm with OK.

Once the duration remaining has elapsed, Prog. finished will appear in the display.
After descaling

- Switch the steam oven off.
- Remove and empty the water container, taking out the spill guard before emptying.
- Dry the water container and the oven interior.
- Leave the appliance door open until the oven interior is completely dry.
Problem solving guide

Many malfunctions and faults that can occur in daily operation can be easily remedied. Time and money will be saved because a service call will not be needed.

The following guide may help you to find the reason for a malfunction or a fault, and to correct it.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause and remedy</th>
</tr>
</thead>
</table>
| You cannot switch the appliance on.  | The fuse is defective or has tripped.  
  ■ Reset the trip switch in the mains fuse box or replace the fuse (minimum fuse rating - see data plate).  
  There may be a technical fault.  
  ■ Disconnect the appliance from the mains connection for approx. 1 minute:  
    – switch off at the isolator, or  
    – disconnect the mains fuse.  
  ■ If, after resetting the trip switch in the mains fuse box and switching the appliance back on, the appliance will still not heat up, contact a qualified electrician or Miele. |
| The oven does not heat up.           | Demo mode has been activated.  
  The steam oven can be operated but does not heat up.  
  ■ Deactivate demo mode. See "Settings - Showroom programme".  
  The oven cavity has been warmed up by a warming drawer in operation underneath it.  
  ■ Open the door and let the oven cool down. |
| The fan can still be heard after the appliance has been switched off. | The fan is still running.  
  The appliance is fitted with a fan which removes steam from the oven. The fan will continue to run for a while after the appliance has been switched off. It will switch itself off automatically after a while. |
<p>| A humming sound can be heard after switching on the appliance, during operation and after switching off the appliance. | It is quite normal and does not indicate any fault with the appliance. It happens when water is being pumped through the system. |</p>
<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause and remedy</th>
</tr>
</thead>
</table>
| After moving house the appliance no longer switches from the heating-up phase to the cooking phase. | The boiling temperature of the water has changed as the altitude of the new location for the appliance differs from the old one by at least 300 m.  
To adjust the boiling temperature, you need to descale the appliance (see "Cleaning and care - Descaling"). |
| During operation an unusually large amount of steam escapes, or steam escapes from parts of the oven where it does not usually. | The door is not properly closed.  
- Close the door.  
  
The door seal is not correctly fitted.  
- Press it in all the way round the door to make sure it is fitted evenly.  
  
The door seal is damaged, e.g. cracks can be seen.  
The door seal needs to be replaced.  
- Call Miele Service.  
- Do not use any microwave modes / functions until the door seal has been replaced. |
| A whistling sound is heard when the appliance is switched on again.    | When the door is closed, the pressure has to equalise, which can cause a whistling sound. This is not a fault. |
| The Start at and Ready at functions are not available.                 | The temperature in the oven is too high, e.g. after a programme has finished.  
- Open the door and let the oven cool down.  
  
These functions are not available with Maintenance. |
| After long cooking programmes using microwave power [ młodzież], the oven interior is very damp. | The steam oven with microwave is a fully fledged steam oven. The cooking compartment is completely hermetically sealed. In contrast, a conventional microwave oven is not air-tight. Because the cooking compartment is steam-tight, condensation will form on the side walls and the inner door panel during long cooking programmes using microwave power [(ray]. The amount of condensate depends on the cooking duration and the level of moisture in the food. |
### Problem solving guide

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause and remedy</th>
</tr>
</thead>
</table>
| The food is not sufficiently heated or is not cooked at the end of a set duration when using microwave power 📅. | The oven was not restarted after interrupting a cooking programme using microwave power.  
- Restart the programme to ensure the food is heated or cooked properly.  
When cooking or heating with microwave power, the time set was too short.  
- Check that the correct duration is selected for the microwave power level. The lower the microwave power level the longer the cooking duration.  
With a very small amount of food, the steam oven automatically reduces the power level to suit the actual amount of food as a safety precaution. The display still shows the previously set initial power level.  
- Restart the programme with a lower microwave power setting to ensure the food is heated or cooked properly. |
| Food has cooled down too quickly after being reheated or cooked with microwave power 📅. | Microwaves cause food to heat from the outside first. This heat then moves towards the middle of the food. If food is cooked at a high power level it is possible that the heat may not have reached the centre of the food. Food may be hot on the outside but cool in the middle. During the standing time the food in the middle will become warmer and that on the outside will become cooler.  
- When heating food with different densities, such as with menu cooking, it is sensible to start with a low power level and select a longer reheating duration. |
| Less than half of the popcorn has popped on the Popcorn function 🍿. | The oven interior was too warm and/or too damp. The cooking duration was too short.  
- See "Popcorn".                                                                                                                                                                                                                           |
| The oven interior lighting is not working. | The lamp is defective.  
- Call Miele Service to have the lamp replaced.                                                                                                                                                                                                                                           |

Optional accessories

Miele offer a comprehensive range of useful accessories as well as cleaning and conditioning products for your Miele appliances.

These products can be ordered through the Miele Webshop.

These can also be ordered from Miele (see end of this booklet for contact details) or from your Miele dealer.

The cooking containers and rack are not suitable for use with microwave power.

Cooking containers

**DGG 1/2-80L**

Solid cooking container
Gross capacity 4.2 litres / Usable capacity 3.6 litres
375 x 197 x 80 mm (W x D x H)

**DGG 1/2-40L**

Solid cooking container
Gross capacity 2.2 litres / Usable capacity 1.6 litres
375 x 197 x 40 mm (W x D x H)

**DGGL 1/2-40L**

Perforated cooking container
Gross capacity 2.2 litres / Usable capacity 1.6 litres
375 x 197 x 40 mm (W x D x H)

**DGG 1/1-40L**

Solid cooking container
Gross capacity 4.0 litres / Usable capacity 3.4 litres
375 x 394 x 40 mm (W x D x H)

**DGGL 1/1-40L**

Perforated cooking container
Gross capacity 4.0 litres / Usable capacity 3.4 litres
375 x 394 x 40 mm (W x D x H)
Optional accessories

Cleaning and care products

Descaling tablets (Qty 6)
For descaling the appliance

Microfibre cloth
Removes finger marks and light soiling

Miscellaneous

DMGS 1/1-30L
Glass condensate tray
For catching excess moisture in Steam cooking mode.
Always place food or containers on this tray when using microwave power.
375 x 394 x 30 mm (W x D x H)

DMSR 1/1L
Rack for placing your own cooking containers on
Safety instructions for installation

⚠ Incorrect installation can result in personal injury and damage to property.

Before connecting the appliance to the mains supply, ensure that the connection data on the data plate (voltage and frequency) match the mains electricity supply. This data must correspond in order to avoid the risk of damage to the appliance. Consult a qualified electrician if in any doubt.

Do not connect the steam oven to the mains electricity supply by a multi-socket adapter or an extension lead. These do not guarantee the required safety of the appliance (fire hazard).

The socket and on-off switch should be easily accessible after the appliance has been installed.

The appliance must be positioned so that you can see the contents of a cooking container placed on the top runner. Otherwise you may risk scalding or burning yourself with hot water and food when taking containers out of the oven.

All dimensions are given in mm.
Detailed dimensions of oven front

PureLine front

ContourLine front

* Glass front / ** metal front
Building-in dimensions

Installation in a tall unit

1. Steam oven
2. Niche
3. Inlet for mains connection cable to the appliance
4. Recommended position for electrical socket. Important: Do not position behind the appliance.
5. Mains connection cable, L = 2000 mm

* Glass front / ** metal front
Installation in a base unit

1. Steam oven
2. Niche
3. Inlet for mains connection cable to the appliance
4. Recommended position for electrical socket. Important: Do not position behind the appliance.
5. Mains connection cable, L = 2000 mm

* Glass front / ** metal front
Installing the steam oven

A malfunction can occur if the steam oven is not correctly aligned. For correct functioning of the steam generator please make sure that the steam oven is horizontally level. The maximum deviation tolerated is 2°.

- Push the steam oven into position in the niche and align it. Make sure that the mains connection cable does not get trapped or damaged when doing so.

- Secure the steam oven using the wood screws supplied (3.5 mm x 25 mm) to the left and right hand sides of the unit.

- Connect the appliance to the electricity supply.

- Check the appliance for correct function in accordance with the operating instructions.
All electrical work should be carried out by a suitably qualified and competent person in strict accordance with current local and national safety regulations (e.g. BS 7671 in the UK). Connection should be made via a switched socket. This will make it easier for service technicians should the appliance need to be repaired. The electrical socket must be easily accessible after installation.

⚠️ Danger of injury. Miele cannot be held liable for unauthorised installation, maintenance and repair work as this can be dangerous to users. Miele cannot be held liable for damage or injury caused by incorrect installation, maintenance or repair work, or by an inadequate or faulty earthing system (e.g. electric shock).

If the plug is removed from the connection cable or if the cable is supplied without a plug, the appliance must be connected to the electrical supply by a suitably qualified electrician.

If the switched socket is not accessible after installation, or if the appliance is to be hard-wired, an additional means of disconnection must be provided for all poles. When switched off, there must be an all-pole contact gap of at least 3 mm in the switch (including switch, fuses and relays). Connection data is shown on the data plate. It must match the mains electrical supply. After installation ensure that all electrical components are shielded and cannot be accessed by users.

**Total power rating**
See data plate

**Connection**
AC 230 V, 50 Hz

The connection data is quoted on the data plate. It must match the household supply.

**Residual current device**
For extra safety, it is advisable to protect the appliance with a suitable residual current device (RCD) with a trip range of 30 mA.
Electrical connection

Disconnecting from the mains

⚠️ Danger of electrical shock.
After disconnection, ensure the appliance cannot be switched back on by mistake.

To disconnect the appliance from the mains power supply, do one of the following depending on installation:

**Safety fuses**
- Completely remove fuses

**Automatic circuit breakers**
- Press the (red) button until the middle (black) button springs out.

**Built-in circuit breakers**
Circuit breakers type B or C:
- Switch the on/off switch from 1 (on) to 0 (off).

**Residual current device (RCD)**
- Switch the main switch from 1 (on) to 0 (off) or press the test button.

Replacing the mains cable

⚠️ Danger of electric shock.
The mains connection cable must only be fitted by a suitably qualified and competent person.

If the mains cable needs to be replaced it must be replaced with a special connection cable, type H 05 VV-F (PVC-insulated), available from Miele.
Contact in case of malfunction
In the event of any faults which you cannot remedy yourself, please contact your Miele Dealer or Miele Service.

Contact information for Miele Service can be found at the end of this document.

Please note that telephone calls may be monitored and recorded for training purposes and that a call-out charge will be applied to service visits where the problem could have been resolved as described in this booklet.

Please quote the model and serial number of your appliance when contacting Miele. This information can be found on the data plate.

Data plate
Stick the extra data plate supplied with the appliance here. Make sure that the model number matches the one specified on the back cover of this document.

Warranty
The appliance warranty is valid for 2 years from date of purchase. In the UK, you must activate your cover by calling 0330 160 6640 or registering online at www.miele.co.uk.

For further information on country specific warranty terms and conditions, please refer to your warranty booklet or contact Miele Customer Service.
